

ENVIRONMENTAL IMPACT ASSESSMENT REPORT

CONSTRUCTION OF NUTRACEUTICAL AND PHARMACEUTICAL PRODUCTS MANUFACTURING FACTORY, AT PLOT NO. 234, 235, SUNDER INDUSTRIAL ESTATE, LAHORE

Project proponent: Ali Asghar Jawa

**Environment Friends of Environment and Economic
Consultant: Development (FEED), Garden Tower Plaza,
Barkat Market, Lahore**

LIST OF ABBREVIATIONS

CO₂	Carbon Dioxide
°C	Degree Celsius
dB(A)	Decibel (Unit of Noise)
IEE	Initial Environmental Examination
EMMP	Environmental Mitigation and Monitoring Plan
EMP	Environmental Management Plan
EPA	Environmental Protection Agency
EP&CC	Environmental Protection and Climate Change Department
HSE	Health, Safety & Environment
m³/h	Cubic meter per hour
NOC	No Objection Certificate
No_x	Oxides of Nitrogen
PM	Particulate Matter
PPEs	Personal Protective Equipment
PEPA 1997	Punjab Environmental Protection Act 1997
SOPs	Standard Operating Procedures
So_x	Oxides of Sulfur

EXECUTIVE SUMMARY

The name of project is “**Construction of Nutraceutical and Pharmaceutical Products Manufacturing Factory, at Plot No. 234, 235, Sunder Industrial Estate, Lahore**”. The project site is a vacant area and management of the project has planned construction of **Nutraceutical and Pharmaceutical Products Manufacturing Factory** after obtaining environmental approval from EPA under section 12 of PEPA 1997. The salient features of the project are as under:

Sr. No	<u>Salient Features</u>	
i.	Title of Project	Construction of Nutraceutical and Pharmaceutical Products Manufacturing Factory
ii.	Location of Project	Plot No. 234, 235, Sunder Industrial Estate, Lahore
iii.	Nature of Project	Nutraceutical and Pharmaceutical Products Manufacturing Factory
iv.	Coordinates	Latitude:31.279395° Longitude: 74. 181511°
v.	Name of Project Proponent	Mr. Ali Asghar Jawa
vi.	Name of Organization/ Environment Consultant	Friends of Environment and Economic Development (FEED), Garden Tower Plaza, Barkat Market, Lahore

Brief Outline of Project

I	Area of project	5.5 Acres
ii	Nature of Area	Government notified Industrial Estate; Sunder Industrial Estate
iii	Quantity of Wastewater	The project is likely to generate very small quantity of wastewater.
Iv	Quantity of Gaseous Emissions	The applicant plans to install state of the art Nutraceutical and Pharmaceutical Products Manufacturing Factory, equipped with

ENVIRONMENTAL IMPACT ASSESMENT

		necessary Air Pollution Control System. The factory management is confident that Air Pollution Control system will keep level of gaseous emissions within Punjab Environmental Quality Standard (PEQS).
v	Environmental Impacts anticipated during Construction Phase of Project	The anticipated impacts during construction phase may include dust, noise, vehicle emissions, workers' safety and employment issues. Chapter 4 of the EIA Report describes all possible environmental impacts and mitigation measures.
vi	Environmental Impacts anticipated during Operation Phase of the Project	The project is not likely to generate adverse environmental impacts during its operational phase. Small quantity of wastewater is anticipated and the same will undergo a Wastewater Treatment Plant to bring the level of pollution within Punjab Environmental Quality Standards PEQS.
vii	Mitigation Measures	Environmental impacts during the construction phase may include noise, dust, solid waste and workers' safety. Mitigation measures have been included in Chapter 4 of the EIA report. Construction-related noise will be mitigated by regular servicing and tuning of the machinery and vehicles. Dust (the only significant air emission) will be controlled by water sprinkling and covering the construction material. The use of adequate PPEs and adherence to the SOPs will ensure the safety of the workers. The contractor will hire local labor for construction work to avoid employment conflicts.
viii	Proposed Environmental Monitoring Plan	The Environmental Monitoring Plan has been prepared and made part of EIA Report.

CHAPTER .1

INTRODUCTION

Chapter 1: INTRODUCTION

The Project Proponent has planned a Project **Construction of Nutraceutical and Pharmaceutical Products Manufacturing Factory, at Plot No. 234, 235, Sunder Industrial Estate, Lahore.** and this document is the Environmental Impact Assessment Report (EIA) of said Project. The main objective of the study is to keep the project in compliance with prevailing Environmental Laws, Rules, and Regulations. The report indicates potential environmental impacts of the project and suggests mitigation measures to enhance the environmental performance of the proposed project. The report is comprehensive and presents the Environmental Impacts of the project during its construction and operational phase along with a monitoring framework to keep the project in compliance with Environmental Laws and Punjab Environmental Quality Standard (PEQS).

1. Objectives of EIA

The main purpose of this report is to meet legal requirements prescribed in Punjab Environmental Protection Act, 1997. Section 12 of Punjab Environmental Protection Act, 1997 states as under:

"No proponent of a project shall commence construction or operation unless he has filed with the Provincial Agency an Initial Environmental Examination (IEE) and, where the project is likely to cause an adverse environmental effect, an Environmental Impact Assessment (EIA), and has obtained approval from the Provincial Agency in respect thereof"

The Punjab Environmental Protection Agency (Review of IEE and EIA Regulations, 2000) provides the details regarding categories of Projects. The project of **Nutraceutical and Pharmaceutical Products Manufacturing Factory**, falls in schedule II of IEE/EIA Regulations 2022, hence this EIA report has been prepared.

The following are the main objectives of EIA Report: -

- i. To determine and document the state of the environment of the project area to establish an environment baseline for assessing the suitability of the Project site.
- ii. To identify construction and operational activities of project and assess their impacts on the environment.

- iii. To assist the proponent in planning, designing, and implementing the project in a way that eliminates or minimizes the negative impacts on the biophysical and socio- economic environment and maximizes the benefits for all parties/stakeholders.
- iv. To present an Environmental Mitigation and Monitoring Plan to smoothly implement the mitigation measures and supervise their efficiency and effectiveness.
- v. To present a Mitigation and Monitoring Plan to smoothly implement the suggested mitigation measures and supervise their efficiency and effectiveness.
- vi. To provide an opportunity for the public to understand the project and its impacts on the community and their environment in the context of sustainable development.

1.2 Brief Introduction to Environment Consultant

The project proponent has hired the services of Environmental Consultant i.e. *Friends of Environment and Economic Development (FEED)*. A team consisting of professionals having qualifications in the field of Environmental Sciences has worked for the collection of requisite data/ information and preparation of Environmental Impact Assessment (EIA).

The Environment Consultant; *Friends of Environment and Economic Development (FEED)* consists of well-trained professionals who provide the following services as per Guidelines, Rules and Regulations notified by EPA Punjab:

- i. Initial Environmental Examination
- ii. Environmental Impacts Assessment
- iii. Socio-Environmental Impacts Assessment
- iv. EPA NOC for the Construction Phase of existing industrial units /new industrial units
- v. EPA NOC for the Operational Phase of industrial units
- vi. Renewal of EPA NOC after every 3-years

1.3 Contact Details of Focal Person of Environment Consultant

The contact details of Environment Consultant are in the following Table 1.

Table 1.1 Contact Details of Focal Person of Environment Consultant	
Name of Environment Consulting Firm	<i>Friends of Environment and Economic Development (FEED)</i>
Contact Person	Ms. Aqsa Tabbasam, Assistant Manager (Environment) (03237843076)
Address	Garden Tower Plaza, Barkat Market, Lahore

1.4 Details of Project Team of Environment Consultant

The following Team of qualified professionals has conducted environmental assessment and contributed for preparation of the IEE / EIA report.

Table 1.2 Details of Project Team of Environment Consultant

Sr.#	Name	Qualification	Roles
i.	Mr. Muhammad Tahir	MSc. Environmental Sciences MSc. Agricultural Engineering	<ul style="list-style-type: none"> • Team Head
ii	Ms. Aqsa Tabbasam	BS Environmental Sciences MS Textile Engineering	<ul style="list-style-type: none"> • Social Survey • Data Collection • Report Writing
iii	Mr. Mehroz Khan	BS Environmental Sciences MS Environmental Sciences	<ul style="list-style-type: none"> • Data Collection • Report Writing
iv	Ms. Amina Ramzan	BS Environmental Sciences	<ul style="list-style-type: none"> • Social Survey • Data Collection • Report Writing

1.5 Screening and Scoping

In an Environmental Impact Assessment (EIA) screening is the initial step to determine if a project is likely to have significant environmental impacts, thus requiring a full EIA, while scoping is the subsequent process that identifies and defines the key environmental issues, alternatives, and the baseline data needed for that EIA. Screening uses criteria or project lists to decide if an EIA is mandatory, leading to outcomes ranging from no further assessment to a full EIA. Scoping then sets the boundaries and terms of reference for the EIA, involving public consultation and stakeholder input to focus the assessment on relevant concerns and ensuring an efficient and comprehensive evaluation.

Screening

Purpose: To determine if a proposed project or plan requires an Environmental Impact Assessment (EIA).

How it Works: It involves evaluating the potential magnitude and significance of a project's environmental and social impacts.

Methods: This can include using predefined lists of projects, applying specific criteria related to potential impacts, or conducting a preliminary environmental examination.

Outcome: The result of screening is a decision on whether a full EIA is necessary, or if alternative, less intensive assessments are sufficient.

Scoping

Purpose: To identify the most significant environmental issues that need to be addressed in the EIA and to define the boundaries of the assessment.

How it Works: It's a collaborative process involving the project proponent, regulatory bodies, and the public to define the scope and detail required for the Environmental Statement.

Activities: Key activities include identifying potential alternatives, establishing the environmental baseline, setting the terms of reference for the assessment, and defining the range of issues to be studied.

Output: The outcome is a scoping opinion or a similar document that guides the developer on the information that must be included in the EIA.

During this phase, all necessary information on the project has been collected and reviewed. A list of potential environmental impacts as well as social issues has been prepared. Relevant data has been collected and compiled, to develop a baseline of the project area's physical, biological, and

human environment. Field visits to the site have been also carried out. The secondary resources included reports of the studies carried out earlier, published books and data, and relevant websites have been utilized. With the help of these resources, a generic profile of the project area has been developed. During these field visits, information on environmental and social parameters has been collected. The environmental and social hot spots falling at or near the project site have been identified, and most importantly, the project's environmental effects have been ascertained.

1.6 Environmental Impacts of Project

The Team determined the potential environmental impacts of the proposed project during the study. Subsequently, the potential environmental impacts have been characterized to determine their significance. Mitigation measures have been identified to minimize the significant environmental effects. A management framework has also been developed in the form of an EMP for the implementation of the mitigation measures identified during the study.

1.7 Structure of Report

This EIA reviews information on existing environmental attributes of the project Area. All-important ecological features, air quality, noise, water quality, social and economic aspects are included. The report predicts the probable impacts on the environment due to the said project. This Environmental Impact Assessment Report (EIA) also proposes various environmental management measures. Details of all background environmental quality, environmental impacts/pollutant generating activities, pollution sources, predicted environmental quality and related aspects have been provided in this report.

The structure of this assessment report is as follows:

- i. Introduction
- ii. Legislative Framework
- iii. Screening and Scoping
- iv. Description of the Project
- v. Description of Environment
- vi. Screening of Potential Environmental Impacts and Mitigation Measures
- vii. Stakeholders Consultations

ENVIRONMENTAL IMPACT ASSESMENT

- viii. Environmental Mitigation and Monitoring Plan (EMMP)
- ix. Conclusion and Recommendations

CHAPTER NO.2

LEGISLATIVE

FRAMEWORK

Chapter 2: LEGISLATIVE FRAMEWORK

Pakistan is a signatory to Multilateral Environmental Agreements and different international treaties. Pakistan has a comprehensive set of environmental legislation covering multiple environmental issues facing Pakistan like pollution of freshwater bodies, gaseous emissions from Industrial Units degradation of ambient air quality, deforestation, loss of biodiversity, lack of proper waste management, and adverse impacts of climate change. The basic policy and legislative framework along with detailed rules, regulations, and guidelines required for implementing the policies and enforcement of legislation for the protection of the environment and biodiversity are in place, in Pakistan.

In Punjab, prime and the most important legal instruments to deal with the environmental matters and challenges, are Punjab Environment Protection Act 1997 and Punjab Environment Quality Standards PEQS. This act is a very comprehensive law and covers all the important aspects as explained below. Similarly, Punjab Environmental Quality Standards are also added in this chapter for ready reference.

2.1 Punjab Environmental Protection Act 1997

After the 18th Amendment in the Constitution of Pakistan, the Federal Ministry of Environment has been dissolved and the subject of Environment and Ecology was devolved to provinces of Pakistan. The province of Punjab has made its own Environment Act titled Punjab Environmental Protection Act, 1997. The Punjab Environmental Protection Act (PEPA), 1997 covers the following important topics /subjects.

- i. Establishment of the Punjab Environmental Protection Council.
- ii. Functions and Powers of the Council.
- iii. Establishment of the Provincial Environmental Protection Agency.
- iv. Functions of the Provincial Agency.
- v. Powers of the Provincial Agency.
- vi. Establishment of the Provincial Sustainable Development Fund.
- vii. Management of the Provincial Sustainable Development Fund.
- viii. Prohibition of certain discharges or emissions.
- ix. Initial environmental examination and environmental impact assessment
- x. Prohibition of import of hazardous waste.
- xi. Handling of hazardous substances.

- xii. Regulation of motor vehicles.
- xiii. Environmental Protection Order.
- xiv. Penalties.
- xv. Offences by bodies corporate.
- xvi. Offences by Government Agencies, local authorities or local councils.
- xvii. Environmental Tribunals.
- xviii. Jurisdiction and powers of Environmental Tribunals.
- xix. Appeals to the Environmental Tribunal.
- xx. Appeals from orders of the Environmental Tribunal.
- xxi. Jurisdiction of Environmental Magistrates.
- xxii. Appeals from orders of Environmental Magistrates.

2.2 Review of IEE/EIA Regulations of 2022

Review of IEE/EIA Regulations provide clear mechanism for processing the NOC applications. The said regulation provides the list of projects requiring IEE through schedule I and the list of projects requiring IEE through schedule II. The said regulations further provide details regarding review fee in its schedule III. The procedure for conducting preliminary scrutiny of project documents and public hearing/ public participation have been stated in detail. In addition to above, the Regulations describes validity period of approval, mechanism regarding entry and inspection, monitoring and cancellation of approval. The Regulations further provides composition of Environmental Assessment Advisory Committee and its mandate.

Apart from the above mentioned two important Legal Instruments (i) Punjab Environmental Protection Act, 1997 (PEPA 1997) and (ii) Review of IEE/EIA Regulations 2022, there are others legal instruments on the subject of Environment and they all are applicable in the Province of Punjab. Some of them are mentioned below: -

- i. Punjab Clean Air Policy and Action Plan
- ii. Policy on Controlling Smog 2017
- iii. Production and Consumption of single use Plastic Products Regulations 2023
- iv. Smog Prevention and Control Rules 2023
- v. Delegation of Powers for Environmental Approvals Rules 2017
- vi. Punjab Hospital Waste Management Rules 2014

2.3 Punjab Environmental Quality Standards (PEQS)

The Govt. of Punjab has notified Punjab Environmental Quality Standards for different kinds of pollutants, as described in the following tables: -

Table 2.1 Punjab Environmental Quality Standards for Ambient Air

Sr. No	Pollutant	Time-Weighted Average	Concentration in Ambient Air	Method of Measurement
1.	Sulfur Dioxide (SO ₂)	Annual Average	80 µg/m ³	Ultraviolet Fluorescence Method
		24 hours	120 µg/m ³	
2.	Oxides of Nitrogen as (NO)	Annual Average	40 µg/m ³	Gas phase chemiluminescence
		24 hours	40 µg/m ³	
3.	Oxides of Nitrogen as (NO)	Annual Average	40 µg/m ³	Gas phase chemiluminescence
		24 hours	80 µg/m ³	
4.	Ozone (o ₃)	1 hour	130 µg/m ³	Non-Dispersive UV Absorption Method
5.	Suspended particulate matter (SPM)	Annual Average	360 µg/m ³	High volume sampling (average flow rate not less than 1.1 m ³ /min)
		24 hours	500 µg/m ³	
6.	Respirable Particulate Matter PM ₁₀	Annual Average	120 µg/m ³	Preferably β-Ray absorption method
		24 hours	150 µg/m ³	
7.	Respirable Particulate Matter PM _{2.5}	Annual Average	15 µg/m ³	Preferably β-Ray absorption method
		24 hours	35 µg/m ³	

	Pollutant	Time-weighted	Concentration	Method Of Measurement
--	-----------	---------------	---------------	-----------------------

ENVIRONMENTAL IMPACT ASSESMENT

		Average	in Ambient AIR	
		1 hour	15 µg/m ³	
8.	Lead (Pb)	Annual Average	1 µg/m ³	Ass method after sampling using EPM2000 or equivalent Filter paper
		24 hours	1.5 µg/m ³	
9.	Carbon Monoxide (CO)	8 hours	5 µg/m ³	Non-Dispersive Infra-Red (NDIR) method
		1 hours	10 µg/m ³	

2.2 Punjab Environmental Quality Standards for Drinking Water

Sr. No.	Properties /Parameters	Standard Values	WHO Standards	Remarks
1.	All water intended for drinking (E. Coil or Thermo-tolerant Coliform bacteria)	Must not be detectable in any 100 ml sample	Must not be detectable in any 100 ml sample	Most Asian countries also follow WHO standards.
2.	Treated water entering the distribution system (E. Coil or thermo-tolerant coliform and total coliform bacteria)	Must not be detectable in any 100 ml sample	Must not be detectable in any 100 ml sample	Most Asian countries also follow WHO standards.
3.	Treated water in the distribution system (E. Coil or thermo-tolerant coliform and total coliform bacteria)	Must not be detectable in any 100 ml sample In the case of large supplies, where sufficient samples are examined, must not be present in 95 % of the sample taken throughout any 12-month period.	Must not be detectable in any 100 ml sample In the case of large supplies, where sufficient samples are examined, must not be present in 95 % of the sample taken throughout any	Most Asian countries also follow WHO standards

ENVIRONMENTAL IMPACT ASSESMENT

			12- month period.	
4.	Color	≤15 TCU	≤15 TCU	
5.	Taste	Non objectionable/ acceptable	Non objectionable/ acceptable	
6.	Odour	Non objectionable/ acceptable	Non objectionable/ acceptable	
7.	Turbidity	<5 NTU	<5 NTU	
8.	Total hardness as CaCO ₃	< 500 mg/l	–	
9.	TDS	< 1000	< 1000	

10.	Ph	6.5 – 8.5	6.5 – 8.5	
11.	Essential Inorganic	mg/Liter	mg/Liter	
12.	Aluminum (Al) mg/l	≤0.2	0.2	
13.	Antimony (Sb)	≤0.005 (P)	0.02	
14.	Barium (Ba)	0.7	0.7	
15.	Arsenic	≤0.05 (P)	0.01	Standard for Pakistan similar to most Asian developing countries
16.	Boron (B)	0.3	0.3	
17.	Cadmium (Cd)	0.01	0.003	Standard for Pakistan similar to most Asian developing countries
18.	Chloride (Cl)	<250	250	
19.	Chromium (Cr)	≤0.05	0.05	

ENVIRONMENTAL IMPACT ASSESMENT

20.	Copper (Cu)	2	2	
21.	Toxic Inorganic	mg/l	mg/l	
22.	Cyanide (CN)	≤0.05	0.07	Standard for Pakistan similar to most Asian developing countries
23.	Fluoride (F)*	≤1.5	1.5	
24.	Lead (Pb)	≤0.05	0.01	Standard for Pakistan similar to most Asian developing countries
25.	Manganese (Mn)	≤0.5	0.5	
26.	Mercury (Hg)	≤0.001	0.001	
27.	Nickel (Ni)	≤0.02	0.02	
28.	Nitrate (NO ₃)	≤50	50	
29.	Nitrite (NO ₃)	≤3 (P)	3	
30.	Selenium (Se)	0.01 (P)	0.01	
31.	Residual chlorine	0.2-0.5 at consumer end 0.5-1.5 at source		
32.	Zinc (Zn)	5.0	3	The standard for Pakistan similar to most Asian developing countries

33.	Organic			
34.	Pesticides mg/l			PSQCA No. 4639 – 2004, page No. 4 Table No. 3 Serial No. 20 – 58 may be consulted

2.2 Punjab Environmental Quality Standards for Municipal and Liquid Industrial Effluents (mg/l, unless otherwise defined)

Sr. No	Parameters	Into Inland Waters	Into Sewage Treatment
1	Temperature or Temperature Increase	≤3°C	≤3°C
2	pH value (H)	6-9	6-9
3	Biochemical Oxygen Demand (BOD) at 20 °C	80	250
4	Chemical Oxygen Demand (COD)"	150	250
5	Total suspended solids (TSS)	200	400
6	Total dissolved solids (TDS)	3500	3500
7	Grease and Oil	10	10
8	Phenolic compounds (as phenol)	0.1	0.3
9	Chloride (as Cl").	1000	1000
10	Cyanide (as CN)	1.0	1.0
11	An-ionic detergents (as MBAs) (2	20	20
12	Sulfate (SO4)	600	1000
13	Fluoride (as F)	10	10

ENVIRONMENTAL IMPACT ASSESMENT

14	Sulfide (S ⁻²)	1.0	1.0
15	Ammonia (NH ₃)	40	40
16	Pesticides ⁽³⁾	0.15	0.15
17	Cadmium (Cd) ⁽⁴⁾	0.1	0.1
18	Chromium (trivalent and hexavalent)	1.0	1.0
19	Copper (Cu) ⁽⁴⁾	1.0	1.0
20	Lead (Pb) ⁽⁴⁾	0.5	0.5
21	Mercury (Hg) ⁽⁴⁾	0.01	0.01
22	Selenium (Se) ⁽⁴⁾	05	0.5
23	Nickel(Ni) ⁽⁴⁾	1.0	1.0
24	Silver(Ag) ⁽⁴⁾	1.0	1.0
25	Total Toxic metals	2.0	2.0
26	Zinc (Zn)	5.0	5.0
27	Arsenic (As) ⁽⁴⁾	1.0	10
28	Barium (Ba) ⁽⁴⁾	1.5	15
29	Iron (Fe)	8.0	8.0
30	Manganese (Mn)	1.5	1.5
31	Boron (Ba) ⁽⁴⁾	6.0	6.0
32	Chlorine (Cl ₂)	1.0	1:0

Explanation:

1. Assuming minimum dilution 1:10 on discharge, lower ratio would attract progressively stringent standards to be determined by the Provincial Environmental Protection Agency. By 1:50 dilution means, for example that for each one cubic meter of treated effluent, the recipient water body should have 10 cubic meter of water for dilution of this effluent.
2. Methylene Blue Active Substances; assuming surfactant as biodegradable.

ENVIRONMENTAL IMPACT ASSESMENT

3. Pesticides include herbicides, fungicides and insecticides.
4. Subject to total toxic metals, discharge should not exceed level given at S.N. 25.
5. Applicable only when and where sewage treatment is operational and BOD5-80 mg/l is achieved by the sewage treatment system.
6. The effluent should not result in temperature increase of more than 30°C at the edge of the zone where initial mixing and dilution take place in the receiving body. In case zone is not defined, use 100 meters from the point of discharge.

Note:

1. Dilution of liquid effluents to meet to the PEQS limiting value is not permissible through fresh water mixing with the effluent before discharging into the environment
2. The concentration of pollutants in water being used will be subtracted from the effluent for calculating the PEQS limits.

Table 2.3 Punjab Environmental Quality Standards for Industrial Gaseous Emissions (Mg/Nm³)

Sr. No.	Parameter	Source of Emissions	Stander
1	Smoke	Smoke opacity not exceed	40% or 2 Ringelmann Scale or equivalent Smoke number
2	Particulate matter	Boilers and furnaces	
		Oil fired	300
		Coal-fired	500
		Cement Kilns	300
		Grinding, crushing, clinkers coolers and related processes, metallurgical processes, converters, blast furnaces and cupolas	500

CHAPTER NO.3

SCREENING AND SCOPING

Chapter 3: SCREENING AND SCOPING

In an Environmental Impact Assessment (EIA), screening is the initial step to determine if a project is likely to have significant environmental impacts, thus requiring a full EIA, while scoping is the subsequent process that identifies and defines the key environmental issues, alternatives, and the baseline data needed for that EIA. Screening uses criteria or project lists to decide if an EIA is mandatory, leading to outcomes ranging from no further assessment to a full EIA. Scoping then sets the boundaries and terms of reference for the EIA, involving public consultation and stakeholder input to focus the assessment on relevant concerns and ensuring an efficient and comprehensive evaluation.

3.1 General information of screening and scoping

Screening

Purpose: To determine if a proposed project or plan requires an Environmental Impact Assessment (EIA).

How it Works: It involves evaluating the potential magnitude and significance of a project's environmental and social impacts.

Methods: This can include using predefined lists of projects, applying specific criteria related to potential impacts, or conducting a preliminary environmental examination.

Outcome: The result of screening is a decision on whether a full EIA is necessary, or if alternative, less intensive assessments are sufficient.

Scoping

Purpose: To identify the most significant environmental issues that need to be addressed in the EIA and to define the boundaries of the assessment.

How it Works: It's a collaborative process involving the project proponent, regulatory bodies, and the public to define the scope and detail required for the Environmental Statement.

ENVIRONMENTAL IMPACT ASSESMENT

Activities: Key activities include identifying potential alternatives, establishing the environmental baseline, setting the terms of reference for the assessment, and defining the range of issues to be studied.

Output: The outcome is a scoping opinion or a similar document that guides the developer on the information that must be included in the EIA.

This section of the study focuses on the details of project screening, scoping, and the selection of alternatives. According to Section 12 of Punjab Environment Protection Act, 1997. "No proponent of a project shall commence construction or operation unless he has filed with the Provisional Agency an initial environmental examination or where the project is likely to cause an adverse environmental effect, an environmental impact assessment (EIA) and has obtained from the Provisional Agency approval in respect thereof.

The IEE/EIA Regulation 2022, classifies the projects under two schedules called Schedule-I and Schedule-II. The Regulations read that a proponent of a project falling in any category specified in Schedule II shall file an EIA with the Provincial Agency and the provisions of section 12 shall apply to such project. According to the said regulations, the proposed project falls under Schedule II.

Scoping

The scoping exercise helps identify key environmental issues that should be highlighted and further investigated in the EIA. Effective scoping is essential in terms of the following: -

- i. Defining the spatial and temporal boundaries.
- ii. Consulting with stakeholders to identify a full range of concerns.
- iii. Focusing on key issues that have been characteristic of the existing environment in the baseline study.
- iv. Reviewing the types of alternatives to be considered.
- v. Making logical decisions that have been more significant and need to be prioritized in the EIA.

3.2 Alternatives

3.2.1 Environmental alternatives

The surrounding environmental conditions are congenial for the project. Both the construction as well as operation phases will not adversely affect the environment. All of the aspects will be kept strictly within the limits defined under Punjab Environmental Quality Standards (PEQS) and the project shall comply with requirements prescribed in Punjab Environmental Protection Act 1997.

3.2.2 Site alternative

The site selected for the project is highly suitable as it is located in the Govt. Notified Industrial Estate namely Sundar Industrial Estate. Sundar Industrial Estate (SIE) is one of the largest and most modern industrial zones in Punjab, Pakistan. It was established under the management of the Punjab Industrial Estates Development and Management Company (PIEDMC) to promote industrial growth, attract investment, and provide organized infrastructure to entrepreneurs. The estate is located on Multan Road, 35 km from Lahore, making it strategically important due to its connectivity with major cities, dry ports, and highways.

Layout & Infrastructure of Sunder Industrial Estate

Sundar Industrial Estate spans over 1,500+ acres of land and is divided into multiple plots for large, medium, and small-scale industries. It provides:

- i. **Road Network:** Wide, carpeted roads for smooth transportation.
- ii. **Power Supply:** Dedicated 132 kV Grid Station ensuring uninterrupted electricity.
- iii. **Gas Supply:** SNGPL network for industrial use.
- iv. **Water Supply & Drainage:** Underground water supply system, sewerage network, and a modern drainage system.
- v. **Waste Management:** Solid waste disposal services and treatment plants.
- vi. **Telecommunication:** Modern telecom and internet facilities.
- vii. **Security:** Boundary walls, gated entry, and round-the-clock security.
- viii.

The following types of industrial Units have been working at Sunder Industrial Estate.

ENVIRONMENTAL IMPACT ASSESMENT

- Textile and Garments
- Pharmaceuticals
- Chemicals and Plastics
- Food and Beverages
- Engineering and Steel Fabrication
- Packaging and Printing
- Leather and Footwear
- Auto parts and allied industries

Environmental and Social Aspects

- SIE has been designed keeping environmental management in mind:
- Proper waste disposal and treatment systems.
- Plantation drives and green belts.
- Efforts to minimize industrial pollution and promote eco-friendly practices.
- Socially, it contributes to community uplift by providing jobs, training opportunities, and business development for SMEs.

The site selected for the establishment of Nutraceutical/ Pharmaceutical products manufacturing factory in Sundar Industrial Estate is of the most feasible option.

CHAPTER .4

PROJECT DESCRIPTION

Chapter 4: PROJECT DESCRIPTION

This section of the study concentrates on details of the project and its salient features, such as location, Site layout, objectives, selection of alternatives, and magnitude of the operations. Inputs and discharges relevant to different phases of the project, such as electricity, vehicles & materials, etc. have been examined to ascertain the potential environmental impacts and to suggest necessary corrective measures required during the construction and operational phase of project to safeguard the environment.

4.1 Project Objectives

The objective of this project is Construction of Nutraceutical and Pharmaceutical Products Manufacturing Factory.

4.3 Location of the Project

The Project site is located at Plot No. 234, 235, Sunder Industrial Estate, Lahore. A Google map showing the location of the project is attached:

Table 4.1 Current Position of Land on 4 Sides of Project Site

1.	<i>Current Position of Land on 4 Sides of Project Site</i>	
2.	North	Vacant Plot
3.	South	Flour Mill
4.	East	Vacant Plot
5.	West	Factory

4.4 Road Access

Sundar Industrial Estate has very good access roads. It has access through Raiwind Road as

well as Multan Road. All the roads accessing the project site are metaled. The map showing the road network of area is annexed.

4.5 Vegetation Features of the Site

Land is clear and no significant plants or vegetation of ecological importance are present at the site. The Project Proponent will develop greenery at the project site after construction work and this greenery will serve as a useful buffer zone to lessen the effects of pollution from different sources. So, the project will not cause any harm to vegetation and environment of the area.

4.6 Relocation and Rehabilitation Plans

No any kind of structural settlement exists at the site to be relocated or dismantled. The land is a vacant plot and hence, no relocation and rehabilitation are required.

4.7 Description of Project

The description of the selected Project is as under in Table 3.2.

Table 4.2 Saliant Features of Project

Sr. No	<i>Saliant Features of Project</i>	
1.	Project Title	Construction of Nutraceutical and Pharmaceutical Products Manufacturing Factory
2.	Total Area	5.5 Acres
	Project Cost	Rs.310 .00 million
	Manpower	Construction phase:30 Operational phase: 150
	Purpose of Project	The main objective of the project is production of Nutraceutical and Pharmaceutical Products
Raw Materials for Nutraceutical Products		
	Active Ingredients	Vitamins: Vitamin C (ascorbic acid), Vitamin D3 (cholecalciferol), Vitamin E (tocopherols), B-

ENVIRONMENTAL IMPACT ASSESMENT

		<p>complex vitamins.</p> <p>Minerals: Calcium carbonate, magnesium oxide, zinc gluconate, iron fumarate, potassium chloride.</p> <p>Amino Acids: L-lysine, L-glutamine, L-carnitine, branched-chain amino acids (BCAAs).</p> <p>Herbal Extracts: Green tea extract, turmeric (curcumin), ginseng, milk thistle, ashwagandha.</p> <p>Probiotics & Prebiotics: Lactobacillus species, bifidobacteria, inulin, fructooligosaccharides.</p> <p>Specialty Bioactives: Omega-3 fatty acids (fish oil, algal oil), Coenzyme Q10, collagen peptides.</p>
	<p>Inactive Ingredients</p>	<p>Excipients (Inactive Ingredients)</p> <p>Used to facilitate processing, stability, and consumer acceptability.</p> <p>Binders: Microcrystalline cellulose, PVP.</p> <p>Fillers/Diluents: Maltodextrin, lactose, dicalcium phosphate.</p> <p>Disintegrants: Croscarmellose sodium, sodium starch glycolate.</p> <p>Lubricants: Magnesium stearate, stearic acid.</p> <p>Coating Agents: HPMC, titanium dioxide, natural colors.</p> <p>Sweeteners & Flavors: Stevia, sucralose, natural fruit flavors.</p>
	<p>Packaging Materials</p>	<ol style="list-style-type: none"> i. Primary Packaging: Blister packs, PET bottles, glass jars, sachets, pouches. ii. Secondary Packaging: Cartons, labels, leaflets. iii. Tertiary Packaging: Shipping cartons.

Raw Materials for Pharmaceutical Products		
	Active Pharmaceutical Ingredients (APIs)	<ul style="list-style-type: none"> • Paracetamol (analgesic) • Amoxicillin (antibiotic) • Ibuprofen (anti-inflammatory) • Metformin (antidiabetic)
	Inactive Ingredients	<p>Facilitate manufacturing, stability, and patient acceptability.</p> <p>Examples:</p> <p>Binders: Starch, PVP (polyvinylpyrrolidone)</p> <p>Fillers/Diluents: Lactose, microcrystalline cellulose</p> <p>Disintegrants: Croscarmellose sodium, sodium starch glycolate</p> <p>Lubricants: Magnesium stearate, stearic acid</p> <p>Preservatives: Methylparaben, sodium benzoate</p> <p>Sweeteners & Flavours: Sucrose, aspartame, menthol</p> <p>Coating materials: Hydroxypropyl methylcellulose (HPMC), titanium dioxide</p>
	Packaging Materials	<p>Primary Packaging: Blister packs, glass vials, plastic bottles, ampoules</p> <p>Secondary Packaging: Cartons, leaflets, shrink wrap</p> <p>Tertiary Packaging: Corrugated boxes for shipping</p>

4.8 Manufacturing Processes in a Nutraceutical Department

The processes vary depending on dosage form (tablets, capsules, powders, liquids, gummies). Below is a generalized sequence:

Step-by-Step Process (Example: Tablets/Capsules)

i. Raw Material Receipt & Quarantine

All materials logged and stored under controlled conditions.

ii. Quality Control Testing

Each lot tested for purity, potency, microbiological safety, heavy metals, and allergens.

iii. Weighing & Dispensing

Ingredients measured according to Master Formula Record (MFR).

iv. Blending/Mixing

Uniform mixing of active ingredients with excipients.

v. Granulation (if required)

Wet or dry granulation for better compressibility.

vi. Drying & Milling

Ensures uniform particle size and moisture content.

vii. Compression / Encapsulation

Tablets pressed; capsules filled with powder or granules.

viii. Coating (Optional)

Film or sugar coating for taste masking, stability, or branding.

ix. In-Process Quality Control

Checks for weight variation, hardness, disintegration time, and active content.

x. Finished Product Testing

Final checks for label claim compliance and safety.

xi. QA Release

Approval for market distribution.

4.9 Manufacturing Processes in a Pharmaceutical Department

The processes depend on dosage form (solid, liquid, semi-solid, sterile). Below is a general sequence for solid oral dosage forms (tablets/capsules):

Step-by-Step Process

i. Raw Material Sourcing & Receipt

- All materials received, labeled, quarantined.
- Quality Control (QC) sampling and testing.

ii. Weighing & Dispensing

Measured according to Batch Manufacturing Record (BMR).

Done in controlled, dust-free rooms.

iii. Granulation (if required)

- Dry granulation (slugging or roller compaction) or
- Wet granulation (binder solution mixed, dried, milled).
- Improves flow and compressibility.

iv. Blending/Mixing

APIs mixed with excipients for uniform distribution.

v. Compression or Encapsulation

Tablets: Compressed in tablet press.

Capsules: Filled using capsule filling machines.

vi. Coating (if required)

Film coating or sugar coating for taste masking, stability, or controlled release.

vii. In-process Quality Control

Hardness, weight variation, friability, disintegration, dissolution.

viii. Packaging

Tablets/capsules packed in blisters, bottles, or strips.

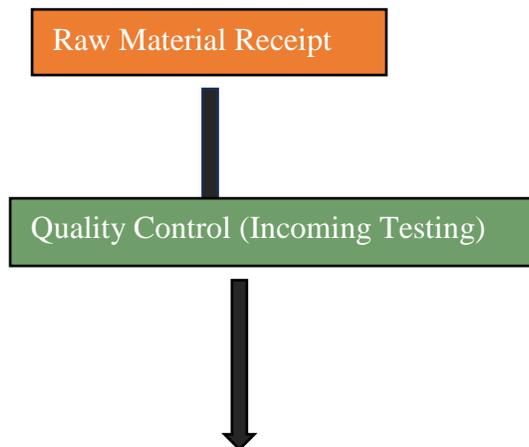

ix. Finished Product Testing

QC checks for potency, purity, microbial limits.

x. Release & Distribution

Approved by QA and released for market.

4.11 Schedule of Implementation

The project construction work will almost 6 months, because this type of projects do not involve civil work, only installation of machinery is required. The schedule of Construction/ Installation of machinery/ Project implementations is as under in **Table 4.3**

Table 4.3 Schedule of Implementation

Sr. No	Activities	First 4 Months	Second 4 Months	Third 4 Months
--------	------------	-------------------	--------------------	-------------------

1.	Construction of Building			
2.	Installation of Machinery			
3.	Trial operation			

4.12 Water and Wastewater Details

i. Sources of water

Water requirement will be met from groundwater through installation of pumps during construction phase as well as during operation phase. There is very little requirement of water during construction as well as operational phase of the project.

ii. Solid Waste

There is no likelihood of solid waste from the operations of the proposed Project. All kinds of raw materials and finished products will be handled appropriately.

iii. Restoration and Rehabilitation Plan

After completion of the construction work, all the disturbed sites will be changed into conditions as they were prior to the commencement of the project or even far better than that. For improving the environmental and aesthetic value or visual quality of the site, the proponent will carry out landscaping and tree planting within premises of factory.

CHAPTER .5
DESCRIPTION OF
ENVIRONMENT

Chapter 5: DESCRIPTION OF ENVIRONMENT

This chapter describes the baseline conditions, which cover the existing physical, ecological, and socio-economic environment of the Project Area. Information on these aspects has been derived from the desk study of available data, field visits to the project area as well as information obtained through visits to the Government departments and other relevant agencies.

5.1 Data Collection

The primary data was collected by surveying the project area and its nearby vicinity. The secondary data regarding physical parameters (topography, geology, seismology, hydrology, and climatology) was obtained by visiting relevant departments and their official websites. The biological parameters (flora and fauna) were also studied in the project area. The vegetation of the project area was studied by preparing a floristic list based on visual observation. The species were recorded in terms of their historical existence in the project area.

Information on wildlife/fauna species (mammals, amphibians, reptiles, birds, etc.) in the assessment area is based on opportunistic observation, gathering the existing information, and consultation with local experts, community members, government, and Non-Government Organizations (NGOs).

5.2 Physical Environment

This part examines the physical resources such as topography, soil, climate, surface and ground water resources and quality, ambient air quality and geology of not only the Project site but also the city as a whole to assess whether the project under assessment can or does have any impacts on any of these parameters. The description of physical environment of District Lahore and the project site is presented in the following sub sections.

5.3 Geography and Geology

The project area is located in Lahore district and lies on the alluvial plains of the Ravi River. The district is characterized by fertile soils, primarily formed by river deposits, making it ideal for agriculture. Geologically, it is part of the Indo-Gangetic Plain, with a flat terrain and minimal elevation changes, and it experiences a subtropical climate.

5.4 Topography

Lahore District lies between the river Ravi, which flows along its boundary with Sheikhupura District. The district has two main types of land: a low-lying area near the river and canals that often floods during the monsoon season, and a higher, flat area farther from the

water. The soil in the low-lying parts is sandy, while the upland areas gently slope from north to south. The elevation in Lahore generally ranges from 200 to 250 meters above sea level

4.5 Hydrology

Groundwater from depth of 200-250 ft can be used for drinking and other purposes. Groundwater is the major source of water in the study area, which is extracted with the help of pumps and motors. The groundwater extracted is used to fulfill various domestic, irrigation and industrial needs. Ground water quality report of area is annexed with this Report.

5.6 Climate

The District Lahore has extreme climate conditions and summer season starts from April and continues till October. During the summer season, temperature ranges from 30 °C to 48 °C.

The winter season starts from November and continues till March. December and January are the coldest months with a mean minimum temperature of about 7-8 °C. The dust storms occur occasionally during the hot season, June, July and August. Climate of District Lahore is very hot and dry in summer and cool in winter.

At an average temperature of 33.5 °C | 92.4 °F, June is the hottest month of the year. The lowest average temperatures in the year occur in January, which it is around 12.3 °C | 54.1°F. Average temperature in Lahore over the year. Average weather in Lahore, Pakistan Climatological information about changes of temperature over the years in Lahore.

ENVIRONMENTAL IMPACT ASSESMENT

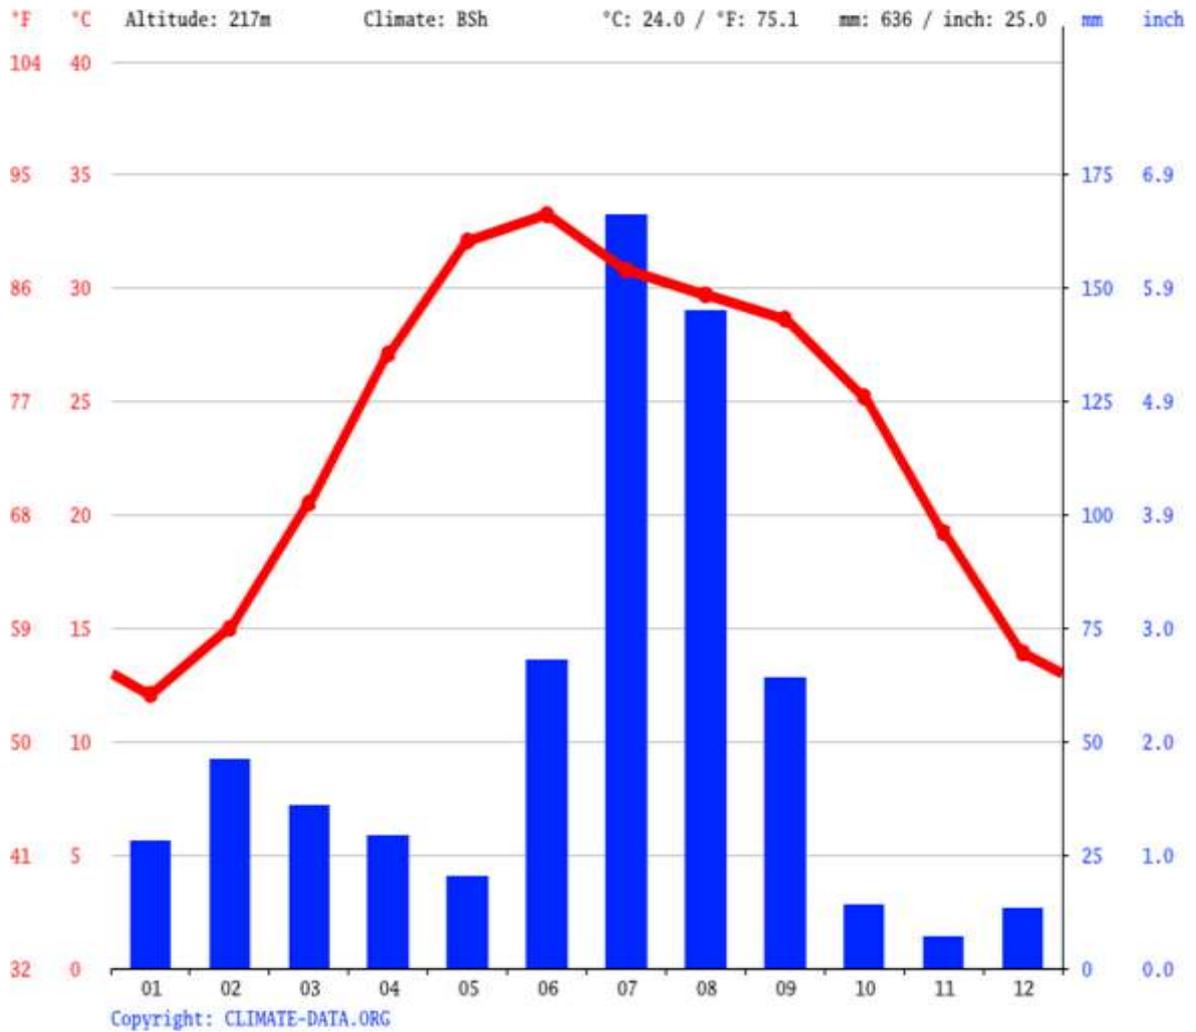

Figure 5.2 Average Annual Temperature and Precipitation of District Lahore

The month of June is the hottest month, reaching around 47°C, while January is the coldest month with temperatures around 7-8°C. This results in a temperature difference of 15°C between the hottest and coldest months. Additionally, there is a significant variation in rainfall, with August having the highest precipitation and November experiencing the least, resulting in a difference of 114 mm.

5.7 Biological Environment

5.7.1 Flora

Several types of floral species are present in district Lahore. However, some of the principal species are in the following pics.

Figure 5.3 Species of Flora

5.7.2 Fauna in the Area

Common mammals found in the area are dogs, cats, house rats, and bats. Snakes such as cobra, kraits, etc. were once common in the tract, but now cases of snake bites are very rare, as these reptiles have been either killed by expanding urbanization or they have moved away. Lizards such as Spiny-tailed lizard (*Uromastix hardwickii*) and fringed-toed lizard (*Acanthodactylus cantoris*) are also reported by the residents of the area.

Amphibians frequently seen in and around the project area, especially during the rainy season, include the common Frog (*Rana tigrina*) and Indus Valley toad. House sparrow (*Passer domesticus*), House crow (*Corvus splendens*), and Mynah (*Acridotheres tristis*) are the most common sights in the area. There are no endangered species of flora and fauna in the Study Area.

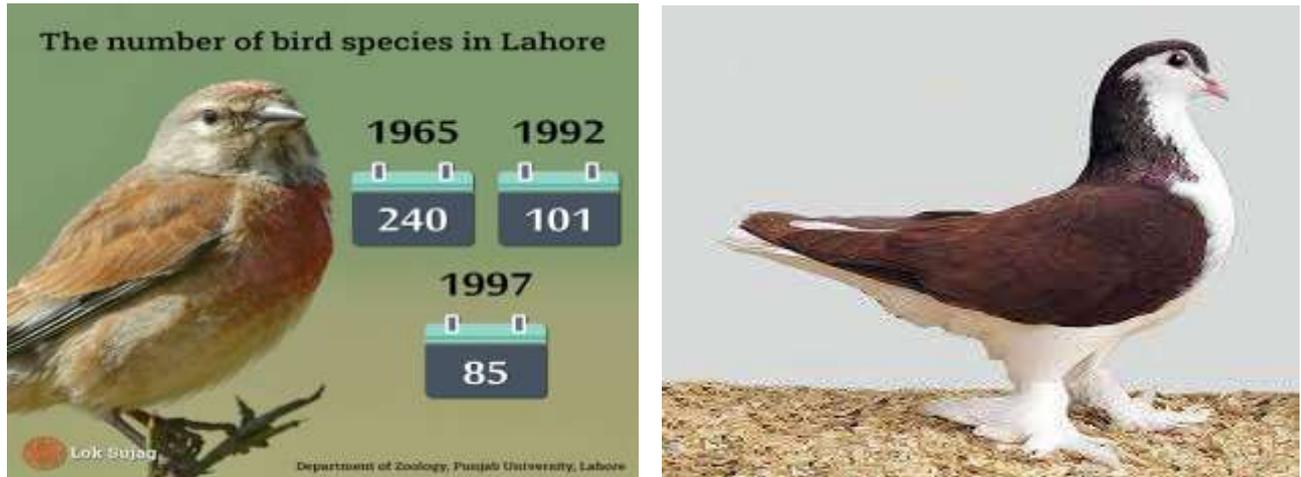

Figure 5.4 Species of Fauna

5.8 Socio-Economic Resources

Socio-economic resources refer to the social and economic factors that impact and are influenced by a project. These include:

- i. Human Resources: The availability of a skilled and unskilled workforce for construction, operation, and maintenance.
- ii. Economic Resources: Local businesses, industries, and markets that may benefit from the project's economic activity.
- iii. Community Infrastructure: Access to roads, healthcare, education, and other services that can be impacted or enhanced by the project.
- iv. Livelihoods: Employment generation, income opportunities, and economic upliftment for the local population.
- v. Social Well-being: The project's influence on public safety, community health, and overall quality of life.

The project area is rich in term of human resources, economic resources, community infrastructure, livelihoods, and social well-being.

5.9 Demography

The population of Lahore is 12,978,661 (13 million) as of 2024. The principal tribes residing here include the Jats, Arains, Dogars, Ansari, Sheikh, Pashtuns etc. Among them, there are also a concentration of Kashmiris who had migrated earlier, during partition. There are also Moreens or artisans; they include Christians, blacksmiths (Lohar), carpenters (Tarkhan), ceramicists (Kumhar), barbers, weavers etc.+

5.10 Literacy Rate

As of the 2023 census, Lahore District has a literacy rate of 79.62%, with male literacy at 81.41% and female literacy at 77.59%. This reflects a significant improvement from earlier years; for instance, the 2006-07 Pakistan Social & Living Measurement survey reported an overall literacy rate of 64.7% in Lahore District. This upward trend highlights the district's ongoing efforts to enhance educational attainment among its residents.

5.11 Industries

The Lahore district hosts a mix of industries, including textile mills, steel mills, foundries food processing units, and small-scale manufacturing facilities. The area may also feature brick kilns and agricultural product processing industries due to its proximity to farming lands. Additionally, logistic and warehousing facilities are common, supporting transportation and trade along the bypass.

5.12 Amenities

The project area is in the of Lahore city and Lahore city offers extensive facilities, including advanced healthcare services with public and private hospitals, a well- established educational network comprising schools, colleges, and universities, and robust transportation infrastructure like roads, railways, and the Metro Bus. It has recreational facilities such as parks, museums, and shopping malls, along with modern utilities like electricity, water supply, and communication networks to support urban living.

5.13 Major Educational Institutions

Lahore is often referred to as the educational capital of Pakistan, home to some of the country's most prestigious institutions. These include:

- i. **University of the Punjab (PU):**

Established in 1882, it is Pakistan's oldest public university and a leading center for higher education and research.

ii. **Lahore University of Management Sciences (LUMS):**

A top-ranked private university offering degrees in business, economics, law, and sciences.

iii. **University of Engineering and Technology (UET), Lahore:**

Renowned for engineering disciplines and technological research.

iv. **King Edward Medical University (KEMU):**

One of the oldest medical institutions in South Asia, known for producing highly qualified medical professionals.

v. **Government College University (GCU), Lahore:**

Offers a wide range of undergraduate and graduate programs and is known for its strong academic heritage.

These institutions attract students from across the country and internationally, contributing significantly to Lahore's cultural and intellectual landscape.

5.14 Major Hospitals

Lahore has a well-developed healthcare infrastructure, offering both public and private health services. Notable hospitals include:

i. **Mayo Hospital:**

One of the oldest and largest government hospitals, affiliated with KEMU, offering a wide range of medical services.

ii. **Shaukat Khanum Memorial Cancer Hospital & Research Centre:**

A state-of-the-art facility specializing in cancer treatment, research, and diagnostics.

iii. **Services Hospital:**

A major public hospital providing general and specialized medical care.

iv. **Jinnah Hospital:**

Another key government hospital, known for its emergency and surgical services.

v. **Hameed Latif Hospital & Doctors Hospital:**

Leading private hospital providing high-quality tertiary care and specialized treatment.

These hospitals serve not only the residents of Lahore but also patients from across Punjab and neighboring regions.

5.15 Major Parks

Despite urbanization, Lahore retains several well-maintained green spaces and recreational parks:

i. **Bagh-e-Jinnah (Lawrence Gardens):**

A historic park with botanical gardens, jogging tracks, and a library; popular for leisure and sports.

ii. **Racecourse Park (Jilani Park):**

Famous for its flower shows, walking tracks, and horse racing track.

iii. **Gulshan-e-Iqbal Park:**

A large urban park with a lake, amusement rides, and walking paths.

iv. **Greater Iqbal Park:**

Located near the Minar-e-Pakistan monument; includes a museum and water fountains.

v. **Model Town Park:** Popular among families and fitness enthusiasts for jogging and morning walks.

These parks play a vital role in providing green relief in a rapidly urbanizing city.

5.16 Major Shopping Malls

Lahore is also a commercial hub with modern shopping facilities catering to diverse consumer needs:

i. **Emporium Mall:**

One of the largest shopping malls in Pakistan, featuring hundreds of retail outlets, food courts, cinemas, and children's entertainment.

ii. **Packages Mall:**

A high-end mall with international and local brands, restaurants, and a hypermarket.

iii. **Fortress Square Mall:**

Located in the Fortress Stadium area, it combines shopping with dining and entertainment.

iv. **Mall of Lahore:**

Situated in the upscale Cantt area, known for luxury shopping and dining.

v. **Amanah Mall:** A family-friendly mall located in Model Town, offering a mix of fashion, grocery, and entertainment options.

CHAPTER .6

POTENTIAL

ENVIRONMENTAL IMPACTS

AND MITIGATION MEASURES

Chapter 6: POTENTIAL ENVIRONMENTAL IMPACTS & MITIGATION MEASURES

Assessment of impacts depends on the nature and magnitude of the project/ activity being undertaken, as well as the type of environmental control measures that are envisaged as part of the project proposal. The potential impacts of the project have been identified and assessed based on the type and scale of the various activities associated with this project. This section discusses the project's potential environmental impacts on the area's geomorphology, soil, water resources, air, biological resources, and socioeconomic conditions and, where applicable, identifies mitigation measures that will reduce, the adverse impacts.

6.1 Identification of Potential Environmental Impacts

In the first step, potential environmental impacts of the project are identified by desktop work using checklists, professional judgment, and published literature on environmental impacts of similar projects, and standard environmental guidelines. Potential impacts are also identified through discussion with project proponent, and consultation with stakeholders and community to identify their concerns. The main aspects associated with potential environmental impacts are as follows: -

- i. Ambient Air Quality
- ii. Waste water and Solid waste
- iii. Noise pollution
- iv. Ecology of the area, including flora and fauna
- v. Soil Contamination and Erosion
- vi. Air Emissions (Dust and Particulate Matter)
- vii. Solid Waste Generation

6.2 Scoping Criteria for Impacts

The potential impacts of the Project/ (construction of Nutraceutical/ Pharmaceutical) are evaluated based on the following criteria:

The current baseline conditions and the anticipated changes in environmental parameters are likely to

be affected by Project. Whether any impact will violate applicable Punjab Environmental Quality Standards (PEQS).

6.3 Methodology for Impact Assessment

The impact assessment methodology defines three levels of consequences (or severity) and likelihood (chance of occurrence) i.e. Low, Moderate/Medium, or High. The significance of an impact is determined based on the level of consequence and likelihood of the impacts.

Table 6.1 Methodology for Impacts Assessment

Sr. No	Level	Severity of Impact (Results)	Likelihood
1.	High	Significant or catastrophic harm to the local and regional environment. A serious threat to the company’s reputation, profitability, and overall ability to operate.	Measurable harm to the environment. Potential impact on reputation and costs. Decreased operational efficiency
2.	Moderate	Measurable damage to the environment Potential to affect reputation/cost Reduced efficiency	Moderate likelihood of occurrence throughout the operational lifetime. Periodic or occasional aspects of the operations.
3.	Low	Negligible damage to the environment No risk to business	Unlikely to occur during lifetime of operation.

6.4 Impacts Assessment

The impacts are classified based on their spatial distribution, i.e. local when impacting an area of approximately 1 km radius from the project area, moderate spread, when impacting an area of 1 to 2 km radius, and regional beyond 2 km.

The impacts are classified as short-term, moderate-term, and long-term in terms of their existence on a temporal scale. Impacts with less than 1 year of existence as short-term term, while those with 1 to 3 years as moderate term and more than 3 years as long term.

The negative impacts are termed as adverse impacts while positive impacts as beneficial. The significance of the environmental impacts of various involved activities has been evaluated based on the following criteria.

Table 6.2: Impacts Significance Area

Sr. No	Impacts Significance	Criteria
1.	Long Term	When the impact is of high intensity with high spread and high duration.
2.	Moderate Term	When the impact is of moderate intensity with high moderate spread and high-moderate duration.
3.	Short Term	When the impact is of low intensity but with moderate spread and moderate duration.
4.	Insignificant	When the impact is of low intensity, low spread, and low duration.
5.	Beneficial	When the Impacts are Positive.

6.5 Environmental Mitigation Measures

Highly effective environmental management practices will be done to keep the project's surrounding environment within safe limits in terms of air and water quality. Environmental monitoring will be conducted as per requirements of environmental law and EPA directions.

6.6 Compensation in Money Terms

There is no damage to flora, fauna, or any other resource, hence compensation in money terms is not needed.

6.7 Replacement/ Relocation/ Rehabilitation

The said project is planned in a vacant area and there is no sensitive area, population, or natural resource. So, replacement, relocation, and rehabilitation are not required.

6.8 Potential Environmental Impacts associated with Project Location

ENVIRONMENTAL IMPACT ASSESMENT

- i. The proponent has selected a site for his project which exists in the vacant area.
- ii. There is no community or human settlement within the safe radius of the site.
- iii. There is no flora & fauna (particularly belonging to an endangered species) within a 2 km radius of the site.
- iv. There is a good road network in the area of the project.
- v. There is no ecologically sensitive or declared protected area (PA) like forest, fish hatcheries, Territorial Waters, wildlife or game reserves, or any structure of socio-cultural significance (historical or archaeological site or religious structures).

It can be safely concluded that the selected site is best suited for the project, and will not pose any adverse environmental impacts.

6.9 Methodology for Impact Assessment

The environmental aspects of the project during all stages namely construction and operation have been selected from a master list of environmental items which is widely used world over for this purpose. The extent of qualitative and quantitative impacts has been described and mitigation measures have been proposed to keep them within permissible limits

6.10 Impacts due to Project Location

The project construction has been planned in a Govt. Notified Industrial Area i.e. Sundar Industrial Estate. The establishment of this unit is not expected to cause any negative impacts at the location of the project because all the environmental aspects shall be kept under strict control with the help of stringent mitigation measures.

6.11 Impacts associated with Construction Phase and Mitigation Measures

The Environmental and Socio-Economic Impacts associated with the construction phase of project, are the following:

- i. Air Pollution
- ii. Waste water and Solid waste
- iii. Noise pollution
- iv. Ecology of the area, including flora and fauna
- v. Air Emissions (Dust and Particulate Matter)
- vi. Solid Waste Generation

6.12 Impacts of Air Pollution

Dust emissions from land clearing, construction activities, and movement of machinery and vehicles may degrade local air quality.

Mitigation Measures:

- Water sprinkling on unpaved roads and active construction sites.
- Covering of construction material during transport and storage.
- Regular maintenance of vehicles and machinery to minimize exhaust emissions.

6.13 Impacts of Noise Pollution

Increased noise levels from construction machinery and equipment may disturb nearby residents and workers.

Mitigation Measures:

- Use of noise-suppressing equipment and proper mufflers.

- Limiting construction activities to daytime hours.
- Provision of personal protective equipment (PPE) like earplugs to workers

6.14 Impacts of Occupational Health and Safety

Workers are exposed to dust, noise, and mechanical hazards, posing health and safety risks.

A comprehensive occupational health and safety plan is as under.

Mitigation Measures

- i. Adequate shuttering should be established and used for all kinds of construction activities
- ii. Comprehensive occupational health and safety plan.
- iii. Regular training programs for workers.
- iv. Provision of PPE (masks, gloves, goggles, etc.).
- v. Emergency response and first aid arrangements on-site.
- vi. Work at height should be performed only after permit to work by HSE staff who shall issue such permit to work at height after taking all appropriate measures.
- vii. Safety signage should be adequately displayed,
- viii. Clean drinking water availability should be ensured for use by all construction staff.
- ix. Emergence response plan should be made, communicated to all and maintained during all construction activities.
- x. First aid facility should be readily available for workers at the site.
- xi. Good house-keeping should be practiced to prevent the events of slips.
- xii. Personal protective equipment like helmets, masks gloves and helmets should be strictly used by the labor according to their assignments at the work site.
- xiii. Fire and any other emergency shall be managed with the help of emergency services.
- xiv. Proper fire safety arrangements will be provided at site. A part form installation of fire hydrant, smoke detectors, fire alarm, safety sign, emergency exits, trained staff from rescue 1122.
- xv. During hot season, outdoor work timing may be changed. Only indoor construction activities may be performed during sunny part of the day. In case of inevitable circumstances, workers should be given adequate breaks.
- xvi. Workers should be given proper fluids during hot season to balance electrolytes in their

body.

xvii. Painting activity should be performed with all occupational health and safety precautions.

6.15 Environmental Enhancement Measures

The following steps shall be taken for environmental enhancement:

- i. Daily sweeping and dusting/cleaning shall be ensured.
- ii. Vacuum cleaning shall be done daily where required.
- iii. The perimeter and lawns of the plot shall be vegetated with flowering plants and fruit trees for environmental enhancement
- iv. Adequate firefighting system will be established and maintained at all times according to the requirements of respective Regulatory Authority.
- v. Visual impacts of the unit and its surroundings shall be given due consideration. Visual impacts shall be improved through landscaping and tree plantation.

The potential environmental impacts of the project and respective mitigation measures are summarized below: -

6.3 Environmental Impact & Mitigation Measures	
Potential Impact	Mitigation Measures
CONSTRUCTION PHASE	
Solid Waste	
<ul style="list-style-type: none"> • Solid waste shall be generated in the form of excavation waste, broken 	<ul style="list-style-type: none"> • All types of waste shall be kept segregated. The waste shall be managed regularly.
bricks, waste concrete material, steel trimmings, etc.	<ul style="list-style-type: none"> • The construction waste shall be disposed of through construction waste contractors. The recyclable part of the waste shall be sold to the recyclers.
Air Pollution	

ENVIRONMENTAL IMPACT ASSESMENT

<ul style="list-style-type: none"> • Particulate matter may arise due to excavation and movement of off-road and on-road vehicles during transport of construction materials such as sand, aggregate, etc. • Cutting, grinding and welding may cause noise pollution. • Off-road or on-road vehicles may also cause exhaust pollution. 	<ul style="list-style-type: none"> • Construction contractor shall be directed to ensure using well-conditioned and well-tuned vehicles and equipment. • Contractor will ensure Sprinkling of water on the exposed surfaces. • Contractor will Cover all trucks loaded with sand and other such lose construction materials. • Regular sweeping of roads and parking areas shall be ensured to avoid deposition of dirt /dust. • Contractor will ensure use of appropriate masks by workers to prevent entry of dust in their breathing system.
<p>Noise Pollution</p>	
<ul style="list-style-type: none"> • Operation of construction machinery and equipment may be a source of noise pollution. • Cutters grinders and welding activities may also cause noise. • Movement of off-road or on-road vehicles may generate noise 	<ul style="list-style-type: none"> • The Project proponent and contractor will ensure that all vehicles are well maintained. • Contractor will ensure use of ear plugs by workers to prevent entry of noise in their ears.
<p>Occupational Health & Safety</p>	
<ul style="list-style-type: none"> • Cutting, grinding, welding operations may operate metal dust 	<p>Contractor will ensure use of personal protective equipment by respective workers.</p>
<p>Socioeconomic</p>	
<ul style="list-style-type: none"> • Disturbance of local population • Jobs for locals 	<ul style="list-style-type: none"> • The construction labor shall be advised to respect the local culture and moral values. • Locals shall be preferred for job as far as possible according to their competence/ education/ skills.

ENVIRONMENTAL IMPACT ASSESMENT

Operational Phase	
Industrial Waste Water	
The project is likely to generate small quantity of waste water originating from containers and floor washings	<ul style="list-style-type: none"> • Installation of Waste Water Treatment Plant in order to ensure compliance with Punjab Environmental Quality Standards. (PEQS).
Air Pollution	
<ul style="list-style-type: none"> • There are such operations /activity during operational phase of project which may generate air pollution. 	Installation of Dust Control System
Occupational Health & Safety	
<ul style="list-style-type: none"> • Fire incident may occur if proper precautionary measures are not taken • Minor and major injuries during Loading and unloading of equipment are possible. 	<ul style="list-style-type: none"> • Training about OHS aspects will assist in managing the risks. • Workers shall be provided with all necessary personal protective equipment to prevent any harm. • Fire extinguishers, fire hydrants and smoke detectors shall be installed.
Socioeconomic	
<ul style="list-style-type: none"> • Disturbance to local population • Jobs for the locals 	<ul style="list-style-type: none"> • The construction labor shall be advised to respect the local culture and moral values. • Locals shall be preferred for job as far as possible according to their competence/ education/ skills.

CHAPTER .7
STAKEHOLDERS
CONSULTATION

CHAPTER NO 7: STAKEHOLDERS CONSULTATION

Stakeholders' consultation refers to the process by which the concerns of relevant persons/ departments who have a plausible stake in the environmental impacts of the project or activity are ascertained to consider all the material concerns in the project or activity design as appropriate.

Impact assessment surveys and stakeholders consultation sessions were held with different stakeholder's groups to take their comments/views proposals. The objectives of this process were to:

- i. Share information with Stakeholders on said project installation and operation
- ii. Share the impacts on the physical, biological, and socioeconomic environment
- iii. Understand stakeholders concerns regarding various aspects of the project
- iv. Collect valuable suggestions from the stakeholders to improve the said project design
- v. Understand the perceptions, assess social impacts, and concerns of the people/communities of the project area
- vi. Raise the awareness level and identify any issues for the implementation of the said project
- vii. Invite people to express their views about the positive/negative impacts on their lifestyles and environment
- viii. Disclose information of contact offices/officers for any complaints/queries

7.1 Objectives of Consultation

Stakeholders' consultation plays a vital role in ascertaining the impacts of the said project on stakeholders in the successful implementation and execution of the project. It provides an opportunity to exchange knowledge with the beneficiaries and affected parties. The involvement of stakeholders is essential, as it leads to better and more acceptable decision-making. The overall objective of the consultation with the stakeholders is to help verify the environmental and social issues, besides technical ones, that have been presumed to arise and to identify those that are not known or are specific to the project. Discourse from many who have thoroughly observed the site conditions in the pre-development phase goes a long way in updating knowledge and understanding.

7.2 Identification of Stakeholders

All the people who are directly or indirectly affected or concerned with the project are the stakeholders. Besides the living population of the surrounding areas, some other stakeholders were

identified and contacted. They are the key players including; shops, public and government offices, schools, hospitals, hotels, and NGOs. Not only published material and other literature was obtained but also the views and concerns of stakeholders were noted.

7.2.1 Direct Stakeholders

No disturbance in the local community is being foreseen due to the installation of the said project as the project is located in open land area. No property loss is being envisaged due to the construction of Asphalt Plant.

7.2.2 Indirect Stakeholders

The indirect impact will occur on those who are living or doing business within a Project Area of Influence (AOI). In the case of the said project, the residents around the project area will get an opportunity to be employed. So, in the early development stages and during the operational phase, people of surrounding communities will be benefited. Indirect respondents include;

- i. Government agencies responsible for dealing with the project-related activities.
- ii. Government Agencies directly or indirectly involved in the execution and monitoring of the said project.
- iii. Government departments such as TMA and the Planning & Development Department, working on other development activities are considered indirect stakeholders.

7.3 Consultation Process

Information disclosure, public consultation, and discussion regarding the various aspects of the project with the people of the area are necessary. This process is intensified during the EIA Studies. Surveys were carried out to investigate physical, biological, and socioeconomic resources falling within the immediate AOI of the project. Primary data collection included:

- i. Data collection regarding the socio-economic conditions of the study area.
- ii. Collection of information on the biological environment from the locals.

7.4 Objectives of Meetings with the Stakeholders

- i. Share information with stakeholders on the said project and expected impacts on the community in the vicinity of the project.
- ii. Understand stakeholders' concerns regarding various aspects of the project, including existing conditions, and the likely impacts of construction and operation activities.
- iii. Provide an opportunity to the public to influence the project design positively.

- iv. Obtain local and traditional knowledge, before decision making.
- v. Increase public confidence in the proponent, reviewers, and decision-makers.
- vi. Reduce conflict through the early identification of controversial issues, and work through them to find acceptable solutions.
- vii. Dissemination of information through discussions, education, and liaison with stakeholders.
- viii. Documentation of information narrated by the stakeholders and mitigation measures proposed by the stakeholders.
- ix. Incorporation of public concerns and their solutions in the EIA; and eliciting their comments and feedback.
- x. Create a sense of ownership of the project proposal in the minds of the stakeholders.

7.5 Consultation with Local Community

The response of various stakeholders in the population of the study area was ascertained by conducting a sample survey, through specially formatted questionnaires. Questions posed to the public were related to the creation of possible impacts, adverse impacts, and beneficial impacts, including; employment opportunities, income generation activities, change in living standards, and provision of the amenity. The various rounds of public meetings and consultations were arranged in the project and study area.

7.6 Summary of Views, Concerns, and Suggestions

The summary of socioeconomic concerns and problems highlighted by different persons have been mentioned here:

- i. No any tree located inside the project area or in the surrounding area should be removed.
- ii. The project will become a source of income for locals to earn their livelihood easily and honorably.
- iii. Employment opportunities should be provided to the locals.
- iv. Water sprinkling should be done regularly during the construction phase to avoid dust emissions.
- v. Good relations with the local communities should be promoted by encouraging the Contractor to provide opportunities to the locals against skilled and unskilled positions.
- vi. The contractor should prefer hiring local labor from adjacent nearby villages.
- vii. Indigenous trees around the facility should be planted to control air pollution and improve the aesthetic conditions of the area.

CHAPTER. 8
ENVIRONMENT MANAGEMENT
& MONITORING PLAN

CHAPTER 8: ENVIRONMENT MANAGEMENT & MONITORING PLAN

This chapter provides the Environmental Management and Monitoring Plan (EMMP) of the project for its construction and operation phases to keep its environment benign and to ensure compliance of Punjab Environmental Quality Standard (PEQS). This section underline the monitoring framework for both construction and operational phases to check compliance of Monitoring Plan and to take timely actions for correction.

Environmental Management & Monitoring Plan (EMMP) for a Nutraceutical / Pharmaceutical Factory

8.1 Introduction

Pharmaceutical manufacturing can generate solid waste, wastewater, air emissions, noise, and chemical hazards. This EMMP ensures compliance with NEQS (Pakistan) or equivalent international standards, minimizes environmental impacts, and safeguards workers' and community health.

8.2 Environmental Aspects and Potential Impacts

Key Environmental Aspects

- i. **Air Emissions** – Dust from material handling, solvent vapors, boiler exhaust.
- ii. **Wastewater** – From cleaning, cooling, process water, lab effluents.
- iii. **Solid Waste** – Packaging materials, rejected products, sludge.
- iv. **Hazardous Waste** – Solvent residues, expired chemicals, contaminated PPE.. **Noise** – From machinery, compressors, HVAC systems.
- v. **Chemical Handling Risks** – Spills, leaks, improper storage.
- vi. **Energy & Water Consumption** – Inefficient use increases environmental footprint.

8.3 Components of Environmental Management and Monitoring Plan

The EMMP consists of the following:

- i. Environmental Management Plan
- ii. Environmental Monitoring Plan
- iii. Communication and Documentation
- iv. Institutional Capacity
- v. Environmental Training

8.4 Environmental Management Plan (EMP)

Table 8.1 Construction Phase				
Sr. No	Activity	Potential Impact	Mitigation Management Measures /	Responsibility
i.	Site clearing & excavation	Dust generation, noise, soil disturbance	Use water sprinkling; cover trucks; limit work hours	Contractor
ii.	Civil works & installation	Noise, waste debris	Use silencers on machinery; proper waste disposal	Contractor
iii.	Material storage	Risk of contamination	Store chemicals on impermeable floors; cover materials	Contractor
iv.	Worker safety	Accidents	PPE, safety training, first-aid facility	Contractor & HSE Officer

Table 8.2 Operational Phase				
Sr. No	Environmental Aspect	Potential Impact	Mitigation / Management Measures	Responsibility
i.	Air emissions (dust, solvent vapors, boiler exhaust)	Air pollution, health issues	Install HEPA filters, scrubbers; maintain boilers; proper ventilation	HSE Dept
ii.	Wastewater discharge	Water pollution	On-site ETP (Effluent Treatment Plant); regular pH, COD, BOD monitoring; reuse treated water for gardening	-do-
iii.	Solid waste	Land pollution	Segregate at source; recycle packaging; sell non-hazardous scrap	-do-
iv.	Hazardous waste	Environmental contamination	Store in labeled containers; dispose through licensed contractors; maintain manifest records	-do-
v.	Noise	Worker discomfort	Enclose noisy machines; provide ear protection; schedule noisy tasks during day	-do-
vi.	Chemical handling	Spills, fire hazards	Spill kits, fire extinguishers; SDS availability; staff training	-do-
vii.	Energy & water use	Resource depletion	Energy-efficient motors; LED lighting; water-saving fixtures	-do-

8.5 Environmental Monitoring Plan

ENVIRONMENTAL IMPACT ASSESMENT

Environmental Monitoring is a vital component of Environmental Management Plan. It is the mechanism through which the effectiveness of the environmental management Plan in protecting the environment is measured. The feedback provided by the environmental monitoring is instrumental in identifying any problem or lapse in the system under implementation and planning corrective actions.

Table 8.3 Environmental Monitoring Plan			
Environmental Component	Standards	Monitoring Frequency	Responsibility
CONSTRUCTION PHASE			
Ambient Air Quality	PEQS	Quarterly	Project proponent
Noise Level	PEQS	-do-	-do-
Health and Safety	OSHA	-do-	-do-
OPERATIONAL PHASE			
Ambient Air Quality	PEQS	Quarterly	Project Proponent
Industrial Waste Water	PEQS	-do-	-do-
Boiler/ Generator Emissions	PEQS	-do-	-do-
Noise Level	PEQS	-do-	-do-
Health and Safety	OSHA	-do-	-do-

Table 8.4 Environmental Monitoring Plan along with Location of Monitoring Points					
Sr. No	Parameter	Location	Frequency	Method / Standard	Responsibility
i.	Ambient air quality (PM ₁₀ , PM _{2.5} , VOCs)	Production & boundary areas	Quarterly	PEQS, USEPA methods	HSE Dept
ii.	Stack emissions (boilers)	Boiler outlet	Quarterly	Stack gas analyzer	HSE Dept
iii.	Noise levels	Near equipment & boundary	Quarterly	Sound level meter	HSE Dept
iv.	Wastewater quality (pH,	ETP inlet & outlet	Quarterly	PEQS standards	Lab & HSE Dept

	BOD, COD, TSS)				
v.	Drinking water quality	Staff canteens, water coolers	Quarterly	WHO guidelines	HSE Dept
vi.	Hazardous waste disposal records	Waste storage area	Quarterly	Manifest & logbook	HSE Dept
vii.	Solid waste generation	All units	Quarterly	Waste tracking forms	HSE Dept

8.6 Supervision & Monitoring

The Environmental Manager will be responsible for all environmental issues and the implementation of EMMP.

8.7 Communications & Documentation

An effective mechanism will be developed to store and communicate environmental information to the responsible persons.

8.8 Environmental Training

Environmental Training will help to ensure that the requirements of the EIA and EMMP are clearly understood and followed by all project personnel in the course of construction and operational phase of project.

Table 8.5 Training Schedule

Target Personal	Topic	Schedule
Selected management staff	HSE Management	Quarterly
All personnel of project	Fire Fighting	-do-

ENVIRONMENTAL IMPACT ASSESMENT

Table 8.6 Annual Environmental Budget

Sr. No	Components	Estimated Cost
1	Environmental Monitoring	Rs. 5,00,000/-
2	Training of staff	Rs. 200,000/-
3	Land preparation and Tree Plantation	Rs. 300,000/-
4	Watering and maintenance of trees/landscape	Rs. 2,00,000/-
Total Rs.12,00,000/-		

CHAPTER.9
CONCLUSION AND
RECOMMENDATION

Chapter 9: CONCLUSION & RECOMMENDATIONS

9.1 Conclusion:

The EIA findings showed that the project design is the most suitable based on the current best practices and the available technology. The project is feasible and desirable from the perspective of environmental and social-economic evaluation undertaken in this study. The overall benefits of the proposed development are far higher than the potential cost of the marginal negative environmental changes which are likely to occur. The proposed project is desirable because it will improve the socio-economic status of the people in the area. It will create employment and deliver a wide range of other socioeconomic benefits.

The baseline environmental assessment of the proposed project site indicates that the site selected for the project does not contain any sensitive area. The EIA establishes that the proposed project design is far more suitable than the No project option.

The project proponent shall shoulder the responsibility of environmental protection and safety of workers. It will also fulfill the requirements of Regulatory Authority i.e. EPA. Employment opportunities shall be provided to skilled, unskilled, and high qualified persons.

Based on an overall assessment of the environmental impacts of the project, it is concluded that the project is not likely to cause any significant adverse impacts on the social, physical, and biological environment of the area.

9.2 Recommendations

Following are recommendations to make this project more environment friendly.

- i. Implementation of EMP must be given priority.
- ii. Proper PPEs including gloves should be provided to workers during Construction and Operational phase of project.
- iii. Workers must be directed to follow SOPs.
- iv. Installation of fire extinguishers in the premises and their regular

INITIAL ENVIRONMENTAL EXAMINATION (2024)

- maintenance must be ensured.
- v. Equipment maintenance and efficiency must be checked regularly.
 - vi. No compromise on public health and the environment should be allowed during Construction and Operational phase of project.
 - vii. A proper tree plantation plan should be developed to support the environment and air quality of the area.
 - viii. Waste storage bins should be installed at different points for proper waste collection and disposal.
 - ix. Smoking should be avoided within the premises of the project site and near chemicals/fuel storage areas.
 - x. The Security Guards shall be trained to provide necessary support in case of any emergency situations.
 - xi. The fire alarms should be installed to signal the evacuation.
 - xii. Proper, communication systems in an effective manner shall be made with hospitals, emergency services, and police for urgent support.

In view of the findings of the IEE / EIA, the proposed project is considered an environmentally safe project.

It is recommended that Environmental Approval for the project may be issued by the Punjab Environmental Protection Agency in favor of this project.

GLOSSARY

- i. **Biodiversity:** The variety of all life forms on earth – different plants, animals, microorganisms, their genes, and the ecosystems they form.
- ii. **Carbon Footprint:** The total amount of greenhouse gases emitted directly or indirectly by human activities, usually measured in carbon dioxide equivalents (CO₂e).
- iii. **Climate Change:** A long-term change in the average weather patterns of the Earth, primarily caused by increased levels of greenhouse gases.
- iv. **Conservation:** The sustainable use and management of natural resources to prevent exploitation, degradation, and destruction.
- v. **Deforestation:** The clearing or thinning of forests by humans, often for agriculture, logging, or development.
- vi. **Ecosystem:** A community of living organisms interacting with their physical environment (e.g., forest, desert, coral reef).
- vii. **Emissions:** Substances released into the air, especially harmful gases such as CO₂, methane, and nitrogen oxides from industrial and vehicular sources.
- viii. **Endangered Species:** Species that are at risk of extinction due to loss of habitat, environmental changes, or human activities.
- ix. **Environmental Impact Assessment (EIA):** A process to evaluate the environmental effects of a proposed project or development.
- x. **Fossil Fuels:** Natural resources like coal, oil, and natural gas formed from ancient organic matter, which release greenhouse gases when burned.
- xi. **Global Warming:** An increase in Earth's average surface temperature due to the buildup of greenhouse gases in the atmosphere.
- xii. **Green Energy / Renewable Energy:** Energy sources that are naturally replenished, like solar, wind, hydro, and geothermal power.
- xiii. **Greenhouse Gases (GHGs):** Gases that trap heat in the atmosphere, including carbon dioxide, methane, nitrous oxide, and fluorinated gases.
- xiv. **Habitat Loss:** Destruction or alteration of the natural environment where wildlife lives, often due to human activity.
- xv. **Pollution:** Contamination of air, water, or soil by harmful substances or waste.

INITIAL ENVIRONMENTAL EXAMINATION (2024)

- xvi. **Recycling:** The process of converting waste materials into new products to reduce resource consumption and pollution.
- xvii. **Renewable Resources:** Resources that can be replenished naturally over time, such as sunlight, wind, and biomass.
- xviii. **Sustainability:** Meeting the needs of the present without compromising the ability of future generations to meet their own needs.
- xix. **Urbanization:** The process of increasing population in cities and towns, often leading to environmental stress and loss of natural spaces.
- xx. **Zero Waste:** A philosophy that encourages the redesign of resource life cycles so that all products are reused, and no trash is sent to landfills or incinerators.
- xxi. Environmental Protection & Industrial Pollution Control
- xxii. **Afforestation / Reforestation:** Planting trees to create forests (afforestation) or restore degraded forest lands (reforestation), used as a pollution mitigation measure and carbon sink.
- xxiii. **Air Pollution Control Devices:** Equipment used to reduce or remove pollutants from industrial exhaust gases. Examples include electrostatic precipitators, baghouse filters, and scrubbers.
- xxiv. **Ambient Air Quality Standards (AAQS):** Limits set for the concentration of pollutants in outdoor air to protect human health and the environment. Enforced by national or regional regulatory bodies.
- xxv. **Best Available Techniques (BAT):** The most effective and advanced stage in industrial technology and methods used to limit emissions and impacts on the environment.
- xxvi. **Bio-remediation:** The use of microorganisms or plants to detoxify and restore polluted industrial sites (soil and water).
- xxvii. **Continuous Emission Monitoring System (CEMS):** An automated system that provides real-time data on the pollutants released from an industrial source, helping ensure regulatory compliance.
- xxviii. **Effluent:** Liquid waste or sewage discharged from an industrial facility into the environment, often treated before disposal.
- xxix. **Effluent Treatment Plant (ETP):** A facility to treat industrial wastewater and remove harmful contaminants before it's discharged into water bodies or reused.

INITIAL ENVIRONMENTAL EXAMINATION (2024)

- xxx. **Environmental Compliance:** The act of adhering to environmental laws, regulations, standards, and permits applicable to an industrial operation.
- xxx.i. **Environmental Management System (EMS):** A framework that helps an organization achieve its environmental goals through consistent control of its operations, often ISO 14001 certified.
- xxx.ii. **Hazardous Waste:** Waste materials from industrial processes that are dangerous to health or the environment and require special handling and disposal.
- xxx.iii. **Noise Pollution:** Unwanted or harmful industrial sound that disrupts the surrounding environment or human well-being, controlled through barriers, enclosures, or silencers.
- xxx.iv. **Particulate Matter (PM):** Fine dust or tiny particles released from industries that can cause respiratory and cardiovascular problems; controlled using filters and scrubbers.
- xxx.v. **Pollution Control Board (PCB):** Statutory authorities (like State Pollution Control Boards or CPCB in India) responsible for monitoring and enforcing environmental regulations in industries.
- xxx.vi. **Resource Recovery:** The process of reclaiming usable substances or energy from industrial waste streams, such as waste-to-energy or metal recovery from slag.
- xxx.vii. **Scrubber:** A device used in industries to remove particulates and/or gases (e.g., SO₂) from industrial exhaust using water or chemical solutions.
- xxx.viii. **Solid Waste Management:** Systematic control of the collection, treatment, and disposal of industrial solid waste, including recycling and landfilling.
- xxx.ix. **Stack Emissions:** Pollutants released into the atmosphere through chimneys or stacks of industrial plants; subject to regular monitoring and standards.
 - xl. **Sustainable Industrial Practices:** Approaches that reduce environmental impact by using energy-efficient processes, clean technology, waste reduction, and closed-loop systems.
 - xli. **Water Pollution Control:** Measures taken to prevent or reduce contamination of water bodies from industrial discharges, including effluent treatment and zero liquid discharge (ZLD) systems.
 - xlii. **Zero Liquid Discharge (ZLD):** A wastewater treatment approach in which all industrial wastewater is purified and reused, eliminating any discharge into the Environment.
