DISCLAIMER

The information presented herein is derived from the unique attributes of the project site as disclosed by the project proponents, stakeholders, and promoters, through provided maps, verbal communications, and all associated documentation. The veracity of the detail's rests solely with the project proponents, stakeholders, and promoters, and not with the environmental consultant. The Environmental Impact Assessment (EIA) or Initial Environmental Examination (IEE) report is not subject to dispute in any court of law.

Representative: EIA & IEE Team

EXECUTIVE SUMMARY

This Environmental Impact Assessment (EIA) report presents a comprehensive overview of the key environmental and social considerations related to the proposed pharmaceutical unit, M/s Horizon Pharma (Pvt) Limited, located at Khewat No. 608, Khatooni No. 161, 162, Khasra No. 253, 254, 289, Mouza Bucheki, Tehsil Raiwind, District Lahore, spanning a total area of 74925 Sqft.

The purpose of a pharmaceutical unit is to research, develop, manufacture, and ensure the quality and safety of medications. It plays a critical role in delivering effective and compliant pharmaceutical products to meet healthcare needs.

Enviro Stewards Company (Pvt.) Limited has been engaged as the environmental consulting firm responsible for preparing this assessment.

In accordance with the Punjab Environmental Protection Act and the Review of IEE & EIA Regulations, 2022, the project falls under Schedule II (list of projects requiring EIA), Category B (Manufacturing and Processing), Sub-sector 2 (Chemical Manufacturing Unit including Pharmaceutical and Cosmetics). As such, the preparation and submission of an EIA is mandatory to obtain the required Environmental Approval from the relevant authorities.

This report evaluates the potential environmental and social impacts of the project across its entire lifecycle. Key areas of focus include land use, water and air quality, solid waste management, traffic patterns, noise levels, and the socio-economic well-being of nearby communities. The findings are supported by field data, stakeholder consultations, and technical analysis.

To address potential adverse impacts, a range of mitigation and management measures have been proposed, aimed at minimizing harm to the environment and surrounding population. These include best practices in construction management, pollution control, and community engagement.

Further technical details and a full description of the project, including planning and construction methodology, are provided in Chapter 05: Project Detail.

Brief of Project

Table 1 Brief of Project

I.	Title of Project	Horizon Pharma (Pvt) Limited
II.	Location of Project	Khewat No. 608, Khatooni No. 161, 162, Khasra No. 253, 254, 289, Mouza Bucheki, Tehsil Raiwind, District Lahore
III.	Area of Project	74925 Sqft
IV.	GPS Coordinates	31.262269 N, 74.176324 E
V.	Current Status of Project	Proposed Project
VI.	Cost of Project	110 million PKR
VII.	Storage Capacity	30,000 pieces per month
VIII.	Proponent of Project	Cdr (R) Idrees Ur Rehman Bhatti
IX.	Description of Project	The project involves the establishment of GMP-compliant pharmaceutical manufacturing company dedicated to producing high quality, affordable and safe medicine for domestic and export market. The facility will operate under the regulatory framework of the Drug Regulatory Authority of Pakistan (DRAP). The company aims to bridge the gap between innovation and accessibility in healthcare by developing, manufacturing, and marketing a broad range of therapeutic formulations, including sterile dosage forms.
X.	Raw Material	Paracetamol, Ciprofloxacin, Metformin HCl, Pantoprazole, Cefixime, Dexamethasone, Lactose, Starch, Povidone

		(PVP), Magnesium Stearate, Titanium Dioxide, Sodium Starch Glycolate
XI.	Product	Tablets and capsules
XII.	Cutting of Trees	There will be no cutting of trees. After construction trees will be planted
XIII.	Water Usage	5-8 liter per day of water will be used for drinking purpose
XIV.	Manpower	20-25 person during construction and 25-35 permanent maintenance staff
XV.	Period of construction	05-06 months
XVI.	Assessed environmental issues	It includes air pollution from fugitive gas emissions, accidental leaks, and exhaust from vehicles and equipment. Noise pollution may arise from machinery and vehicle movement, while spills can lead to soil and water contamination. Additionally, the unit generates wastewater containing chemicals and minor solid waste from packaging and maintenance activities.
XVII.	Wastewater generation	Wastewater will be generate from domestic use and small amount from operational activities
XVIII.	Wastewater management/ disposal	After treatment in septic tanks, it will be disposed of in the sewerage system
XIX.	Rainwater Harvesting Plan	Infiltration trenches and storage tanks will be installed for RWH, detail in given under Heading 9 (RHW)
XX.	Control measures	Installation of air pollution control systems like scrubbers and filters to reduce emissions and using gas detectors and

		proper ventilation to prevent leaks and fire hazards. Noise can be minimized through soundproofing and scheduled operations. Spill containment systems, proper storage, and regular maintenance help prevent soil and water contamination. Wastewater will be treated in treatment plants, and solid waste will be segregated, treated, and disposed of as per regulatory norms. Emergency response plans and regular staff training further ensure environmental safety and compliance.
XXI.	Protected Areas	As per field visits and consultations with wildlife and forest departments, the proposed project area does not fall in any protected area, i.e. National Parks, Wildlife Sanctuaries, or Forest areas, etc.
XXII.	Consultant Company	Enviro Stewards Company (Pvt) Limited
XXIII.	Compliance	In accordance with Punjab Environmental Protection Act & IEE/EIA Regulations 2022

Legal and Administrative Framework

These include the National Conservation Strategy (1992), National Environmental Policy (2005), Pakistan Labor Policy (2010), and the Punjab Environmental Protection Act (PEPA 1997), along with its subsequent amendment in 2012. Additionally, the project ensures compliance with the Punjab Environmental Quality Standards (PEQS), the Land Acquisition Act (1894), the Prohibition of Cutting of Trees Act (1975), the Punjab Wildlife Act (1974), the Punjab Plantation and Maintenance of Trees Act (1974), and the Antiquities Act (1975).

A thorough review of environmental documents has been conducted, underscoring the mandatory submission of an environmental assessment study report as required by the Pakistan Environmental Protection Ordinance (PEPO), 1983, and reinforced by the Pakistan Environmental Protection Act (1997). Specifically, Section 12(1) of the amended PEPA (2012) stipulates that any project involving the construction or modification of the physical environment must conduct an Environmental Impact Assessment (EIA) or an Initial Environmental Examination (IEE) and obtain approval (NOC) from the relevant provincial environmental authority.

In the preparation of the Environmental Impact Assessment (EIA) report for Proposed project, full consideration has been given to the PEPA (1997), the Punjab Environmental Protection (Amendment) Act (2012), and all other applicable legal requirements from both the Pakistan and Punjab governments, including the Land Acquisition Act (1894).

Assessment of Major Impacts

During Construction Phase

The construction phase of the Proposed project will involve significant land development and infrastructure activities, which are likely to result in several environmental impacts. These impacts will primarily include soil erosion, dust generation, noise pollution, and disruption of local ecosystems. Soil erosion may occur due to excavation and land grading, particularly during heavy rainfall, which can lead to sedimentation of nearby water bodies. The generation of dust during construction activities can have adverse effects on air quality, leading to health issues for workers and the surrounding community. Noise pollution from machinery and construction activities will likely impact both the local community and wildlife in the vicinity, especially during nighttime construction. Additionally, the project may disrupt local wildlife habitats, potentially leading to displacement of species, especially if there are areas of natural vegetation or wetland ecosystems within the project site.

During Operational Phase

Once operational, the proposed pharmaceutical unit will generate a range of environmental impacts primarily related to air emissions, energy consumption, waste management, and increased vehicle movement. During manufacturing and material handling processes, there is a potential risk of fugitive emissions of volatile compounds, which could affect local air quality if not properly controlled. The unit will require energy for operating machinery, HVAC systems, and safety equipment, contributing to indirect emissions, especially if sourced from non-renewable electricity. Minor solid waste, such as packaging materials, used filters, and maintenance residues, will need proper handling and disposal to prevent soil and water contamination. Additionally, increased vehicular traffic for the transport of raw materials and finished products may lead to higher emissions of greenhouse gases and pollutants, along with noise and traffic congestion in the surrounding area. Effective safety protocols and environmental management systems will be crucial to minimize these risks during operations.

Proposed Mitigation Measures

Mitigation Measures During Construction Phase

- **Dust Control:** Water sprinkling on unpaved roads, construction sites, and material stockpiles will be carried out regularly to suppress dust. Construction materials such as sand and cement will be stored in covered areas or containers.
- **Noise Reduction:** Use of well-maintained and quieter machinery, along with limiting high-noise activities to daytime hours, will help reduce the impact on nearby communities and wildlife. Workers will be provided with protective hearing equipment where needed.
- **Erosion and Sediment Control:** Proper grading, construction of drainage channels, and installation of silt fences will help manage stormwater runoff and reduce soil erosion during excavation and site leveling.
- **Waste Management:** Construction waste will be segregated and disposed of by EPA approved vendor. Recyclable materials such as metal, wood, and concrete will be separated and reused where possible.

- **Protection of Flora and Fauna:** Vegetation clearance will be minimized, and native plants will be preserved where feasible. Construction zones will be clearly marked to avoid encroachment into ecologically sensitive areas.
- **Health and Safety:** Workers will be provided with safety gear and training. On-site medical aid and emergency response protocols will be established.
- **Traffic Management:** A traffic management plan will be implemented to control heavy vehicle movement and reduce inconvenience to local traffic, especially near residential areas.

Mitigation Measures During Operational Phase

- **Solid Waste Management:** A proper system will be implemented for the collection, segregation, and safe disposal of solid waste, including packaging materials in compliance.
- **Sewage and Wastewater Treatment:** A septic tank system will be installed to treat wastewater and domestic sewage processes before safe disposal or potential reuse, preventing contamination of surface and groundwater sources.
- **Water Conservation:** Water-saving fixtures will be installed across the facility, and awareness will be promoted among staff to reduce consumption. Rainwater harvesting systems may also be introduced to supplement water use.
- **Energy Efficiency:** Energy-efficient equipment, lighting, and insulation will be incorporated into the facility design. Use of renewable energy sources, such as solar panels, will be considered to lower dependence on conventional power and reduce emissions.
- **Green Landscaping:** Landscaping with native, low-maintenance plant species will be developed to reduce water use, enhance site aesthetics, and contribute to better air quality through green belt development.
- **Traffic and Transportation:** Efficient logistics planning will be adopted to manage the movement of raw materials and finished goods. Measures such as designated loading/unloading zones and promotion of shared or fuel-efficient transport will help reduce traffic congestion and emissions.

- **Environmental Monitoring:** Continuous monitoring of air, water, and noise levels will be conducted to ensure compliance with environmental norms. A comprehensive Environmental Management Plan (EMP) will be followed to guide sustainable and safe operations throughout the unit's lifecycle.

Proposed Monitoring Framework

Given the requirement for an Environmental Impact Assessment (EIA) due to the potential long-term, significant, or adverse environmental impacts associated with the pharmaceutical unit, it is essential to implement a comprehensive Environmental Monitoring Program. This program will systematically monitor key environmental parameters throughout all phases of the project—planning, construction, and post-construction to ensure full compliance with the Punjab Environmental Quality Standards (PEQS) and other applicable legal requirements.

The Environmental Management and Monitoring Plan serves as a strategic tool to minimize potential negative environmental effects during the development and operational stages of the pharmaceutical unit. It also seeks to enhance the overall project value by enforcing high standards for health, safety, and environmental protection.

The project proponent is fully committed to implementing all proposed mitigation measures during the land development, construction, and habitation phases. Environmental monitoring is a core element of this commitment and will be conducted regularly to assess compliance and performance. The specific details of the monitoring approach and frequency are provided in Chapter 08 of the report.

Conclusions and Recommendations

The proposed pharmaceutical unit is expected to generate significant positive impacts, particularly by creating employment opportunities, enhancing fuel supply reliability, and supporting local commercial and domestic energy needs. The project will contribute to economic growth, improved business activities, and upliftment of the socioeconomic conditions of the surrounding community.

While some minor to moderate environmental risks may arise during the operational phase such as fugitive gas emissions, noise from filling operations, increased vehicular traffic, and potential fire or safety hazards, these impacts are considered manageable with proper safety and environmental controls.

The recommended mitigation measures, including leak detection systems, firefighting infrastructure, proper waste handling, and traffic management, are practical and cost-effective to minimize any negative effects.

To ensure environmental and operational sustainability, a robust Environmental Management Plan (EMP) with monitoring and safety protocols has been proposed.

It is strongly recommended that the project proponent obtains all necessary regulatory approvals and licenses, including the Initial Environmental Examination (IEE)/Environmental Impact Assessment (EIA) clearance and No Objection Certificate (NOC) from the Punjab Environmental Protection Agency (Punjab EPA) ensuring full compliance with applicable laws and standards.

1 INTRODUCTION

1.1 General

The rapid growth in Pakistan's population and healthcare awareness has significantly increased the demand for quality medicines and healthcare products, highlighting the urgent need for establishing new pharmaceutical units across the country. The installation of pharmaceutical manufacturing facilities has become increasingly vital to ensure a steady supply of essential drugs, reduce dependency on imported medicines, and strengthen the local healthcare infrastructure.

Pharmaceutical units play a crucial role in promoting public health by ensuring the availability of affordable, safe, and effective medications for both urban and rural populations. Economically, these units support industrial growth, generate employment opportunities, and contribute to the national GDP through local production and potential exports. Furthermore, the development of pharmaceutical manufacturing encourages research and innovation, fosters technology transfer, and improves the overall healthcare delivery system. From an environmental perspective, modern pharmaceutical units designed with Good Manufacturing Practices (GMP) and environmental management systems help minimize waste generation, control emissions, and promote sustainable industrial operations. The expansion of this sector aligns with Pakistan's national objectives of achieving self-sufficiency in medicine production, enhancing healthcare accessibility, and ensuring sustainable industrial development.

Given its scale and potential impact, an Environmental Impact Assessment (EIA) is being undertaken to assess and address any environmental and social concerns, in compliance with the Punjab Environmental Protection Act and IEE/EIA Regulations 2022.

1.2 Purpose of the Report

This report has been prepared to conform to the requirements of the Punjab Environmental Protection (Amendment) Act 2012 (PEPA), which states that:

“No proponent of a project shall commence construction or operation unless he has filed with the Provincial Agency an Initial Environmental Examination or where the project is likely to cause an adverse environmental effect, an Environmental Impact Assessment, and has obtained from the Provincial Agency approval in respect thereof.”

The EIA report is comprehensive, covering socio-economic, physical, and environmental aspects, including land use, forestry, crops, water bodies, biodiversity (flora and fauna), heritage, and other factors relevant to the project and its surrounding area. It meticulously details mitigation strategies intended to address and neutralize potential environmental impacts on human and environmental health in the vicinity of the project site. These strategies are applicable during both the construction phase and the regular operation of the project.

Moreover, the report serves as a crucial document for decision-makers, particularly the EPA of Punjab, providing all necessary information in the officially approved format. This facilitates an informed decision-making process regarding the issuance of the required environmental approval. Through this report, the proponent demonstrates a commitment to adhering to the Punjab Environment Quality Standards (PEQS) and maintaining a robust environmental management order throughout the lifecycle of the project.

1.3 Identification of the project and proponent

The details of the project and proponent are given below:

Name of project	Horizon Pharma (Pvt) Limited
Location of project	Khewat No. 608, Khatooni No. 161, 162, Khasra No. 253, 254, 289, Mouza Bucheki, Tehsil Raiwind, District Lahore

Proponent name	Cdr (R) Idrees Ur Rehman Bhatti
Address of proponent	House 47-B, Askari-5, Gulberg 3, Lahore
CNIC	42301-8913609-7

1.4 Consultant Information

The initiator has contracted with M/s Enviro Stewards Company (Private) Limited for the execution of report for the aforementioned project, in alignment with the standards and guidelines set forth by the Environmental Protection Agency (EPA) of Punjab. To fulfill this objective, M/s Enviro Stewards Company (Private) Limited has assembled a team of experts, including environmental specialists, environmental engineers, and chemical engineers. Further information on the consultancy team is provided below:

Detail of the Consultant	
Company name	Enviro Stewards Company (Private) Limited
Address	1 st Floor Allied Bank A-Block Commercial Market Canal View Society, Lahore.
Contact No.	0301-1199600

1.5 Nature, Size and Location of Project

Horizon Pharma (Pvt.) Limited is a proposed pharmaceutical unit planned over a total area of 74925 Sqft, located at Kot Khewat No. 608, Khatooni No. 161, 162, Khasra No. 253, 254, 289, Mouza Bucheki, Tehsil Raiwind, District Lahore. Its strategic location will enhance local energy accessibility, support regional economic activities, and contribute to sustainable development by providing a cleaner and more reliable fuel alternative. Below is the detail of area:

Sr. #	Description of area	Area
1)	Total Covered Area	53854 Sqft
2)	Total Open Area	21071 Sqft
3)	Total Area of Plot	74925 Sqft

Figure 1 Site Location

1.6 Scope of the EIA Study, Area of Influence, and Magnitude of Efforts

The scope of this Environmental Impact Assessment (EIA) study covers all potential environmental, social, and safety impacts associated with the proposed Horizon Pharma (Pvt.) Limited unit. It includes the assessment of impacts during construction, operation, and decommissioning phases, focusing on air quality, noise, soil and water resources, solid and liquid waste management, traffic impacts, occupational health and safety, and socio-economic conditions.

The area of influence extends beyond the project boundary to include the immediate surroundings that may be affected by vehicular movement, emissions, or accidental leaks, as well as nearby communities and sensitive receptors. It also considers regional impacts on local infrastructure, emergency response services, and economic activities.

The magnitude of efforts involves site inspections, stakeholder consultations, baseline environmental monitoring, risk assessment, and mitigation planning. Special emphasis has been placed on safety and environmental sustainability, in line with the Punjab Environmental Protection Act, and national environmental quality standards.

2 POLICY, LEGISLATION, LEGAL & ADMINISTRATIVE FRAMEWORK

2.1 General Overview

The proposed project will be developed and operated in accordance with the national and provincial environmental policies, legal requirements, and regulatory frameworks governing in Pakistan. The project aligns with the Pakistan Environmental Protection Act, 1997, and the Punjab Environmental Protection (Amendment) Act, 2012, which mandate environmental compliance through an Initial Environmental Examination (IEE) or Environmental Impact Assessment (EIA) approval from the Punjab Environmental Protection Agency (Punjab EPA).

Furthermore, the project adheres to the Punjab Environmental Quality Standards (PEQS) for air emissions, noise levels, and waste management to minimize environmental impacts.

2.2 Screening

Horizon Pharma (Pvt) Limited, with a project area of 74925 Sqft, falls under the following classification for environmental assessment Schedule II (list of projects requiring an EIA), Category B (Manufacturing and Processing), Sub-sector 2 (Chemical Manufacturing Unit including Pharmaceutical and Cosmetics).

In line with the Review of IEE & EIA Regulations, 2022, this classification mandates that the project must conduct an EIA for obtaining environmental approval from the Punjab Environmental Protection Agency (Punjab EPA). This ensures that the project is subject to appropriate regulatory oversight while not unduly burdening developers with excessive requirements.

2.3 Regulatory and Framework Compliance

The EIA study is guided by a range of legal, regulatory, and policy instruments that ensure environmental and planning compliance. These instruments collectively form a

comprehensive framework that governs the environmental aspects of housing developments in Punjab.

2.4 Relevant Legal and Institutional Framework

2.4.1 Punjab Environmental Protection Act, 1997 (Amended 2012)

This Act is the cornerstone of environmental law in Punjab and mandates the preparation of an IEE/EIA for any project that could significantly impact the environment. It establishes the powers of the Punjab EPA to review, approve, and monitor environmental assessments, ensuring that development activities comply with environmental protection standards.

2.4.2 Review of IEE & EIA Regulations, 2022

These regulations under the Punjab Environmental Protection Act detail the procedures for the preparation, review, and approval of environmental reports. The regulations specify timelines, content requirements, and the classification of projects according to their potential environmental impact.

2.4.3 National Environmental Policy, 2005

The National Environmental Policy sets the overarching vision for environmental governance in Pakistan, promoting sustainable development across all sectors. It emphasizes the importance of integrating environmental considerations into the planning process and provides a framework for policy alignment at both federal and provincial levels. The housing sector must ensure that it aligns with this national policy, especially regarding urban planning, waste management, and resource conservation.

2.4.4 Punjab Local Government Act, 2022

This act defines the responsibilities of local governments in land development, waste management, municipal services, and infrastructure within urban settings. Pharmaceutical units must coordinate with local government authorities to ensure proper planning, waste management, and service delivery.

2.4.5 Explosives Act, 1884

This law regulates the handling of explosive and highly flammable materials. It requires specific safety precautions, secure storage, and government approvals for facilities handling combustible substances.

2.4.6 Civil Defense & Rescue 1122 Regulations

These require facilities to have approved fire safety systems, emergency response plans, and firefighting equipment. Rescue 1122 conducts inspections to ensure readiness for fire and accident control.

2.4.7 Punjab Municipal Solid Waste Management Rules, 2022

These rules regulate the collection, storage, transportation, and disposal of solid waste in Punjab. Pharmaceutical units are required to establish waste management systems that comply with these rules, ensuring that the project does not contribute to environmental degradation through improper waste handling.

2.4.8 Punjab Water Act, 2019

The Punjab Water Act governs water resources, including the extraction of groundwater and the management of water systems. For Pharmaceutical units, it is crucial to ensure that water use is sustainable, that stormwater is managed effectively, and that any new water extraction activities do not deplete local aquifers.

2.4.9 Punjab Wildlife Act, 1974

This law is applicable if the unit is located near any protected or sensitive wildlife habitats. It governs the protection and management of biodiversity, including native plant and animal species. If the project area affects such habitats, appropriate mitigation measures will need to be implemented.

2.4.10 Forest Act, 1927

If the project site is located in or near forested areas, this Act requires that the developer obtain permission before clearing any forested land. It regulates deforestation activities and mandates the preservation of forest cover wherever possible.

2.4.11 Labor, Safety and Health Laws

These laws ensure the safety, health, and welfare of workers during construction activities. They set guidelines for workplace safety, worker health conditions, and risk management.

2.4.12 Public Consultation Guidelines, 1997

This guideline emphasizes the importance of early and inclusive public consultation with stakeholders, especially with communities living near the project site. It mandates that affected populations and municipal bodies are consulted before finalizing project plans, ensuring that the community's concerns are addressed.

2.4.13 Guidelines for Sensitive and Critical Areas

If the project site is located near sensitive or critical areas such as schools, hospitals, water bodies, wetlands, or areas of cultural heritage, these guidelines must be followed. They ensure that the project minimizes any adverse impacts on these sensitive environments.

2.5 Institutional Framework

The following institutions play key roles in regulating and overseeing environmental compliance for pharmaceutical units in Punjab:

- **Punjab Environmental Protection Agency (Punjab EPA):** Enforces environmental laws, reviews and approves IEE/EIA reports, and ensures compliance with Punjab Environmental Quality Standards (PEQS) for emissions, noise, and waste management.
- **District Administration and Municipal Committees:** Grant local approvals, monitor land use compliance, and ensure that the facility aligns with local governance and community requirements.
- **Punjab Local Government Board:** Supervises urban development aspects, including infrastructure and service provisions related to industrial and fuel storage projects.

3 SCOPING

The scoping in Environmental Impact Assessment involves a comprehensive assessment of the potential impacts of a project or activity, including direct and indirect impacts, cumulative impacts, and potential long-term effects. This assessment is carried out by a team of environmental and social experts, who analyze the proposed project or activity in detail and identify potential risks and impacts on various aspects of the environment, such as air quality, water quality, biodiversity, and cultural heritage. In this Environmental Impact Assessment, a public consultation process is involved, where members of the public and other stakeholders can provide feedback and raise concerns about the proposed project or activity.

3.1 Spatial and Temporal Boundaries of Environmental Assessment

Due to construction of the current project, land use will change from open land to industrial by M/s Horizon Pharma Pvt. Ltd. Within radius of 5-km, no residential area can be seen but few commercial markets are there represent in figure given below but current project will be installed by adopting proper mitigation measures to avoid disturbance in nearby area and local community. In current project no significant emission will be observed because in proposed project there will be only storage. Wastewater quality will be measured to ensure PEQS. No environmentally sensitive area is present within safe distance that could be impacted due to proposed project.

3.2 Important Issues and Concerns Raised during Consultation

During consultation it was observed that many people were in favor of the project but some of the issues and concerns were raised. During survey following concerns of local community, Government Departments, Environmental Practitioners and Experts, nearby industries were noted:

- Local should be preferred for the job opportunities
- Proper training should be given to workers
- Noisy activities should be confined
- Air pollution should be controlled effectively
- There should be careful handling of storage devices
- Wastewater should not be disposed of without proper treatment
- Solid waste must be collected timely
- Gas measurement devices should be used for continuous monitoring
- A proper wastewater treatment plant should be installed
- Ensure the tree plantation in the vicinity of area
- Health and safety of workers should be ensured
- EMMP should be designed and enforced with great spirit
- Respective team officers should be responsible for the implementation of management plan and actions
- Avoid the excessive use of groundwater. Limited amount of water should be use
- Cleanliness of area should be ensured
- To reduce or avoid air pollution transport vehicles should be covered in the construction phase
- Proponent shall work for betterment of community

3.3 Significant Impacts and Factors to be Determined

The factors and impacts to be determined around the project site are:

- Dust and Particulate emissions
- Wastewater generation and its treatment

- Control Air emissions
- Solid waste management
- Occupational Health and safety
- Site Security
- Check and balance of storage unit
- Traffic Management
- Hygiene management
- Community impacts
- Job opportunities for locals
- Confined noisy activities.
- Resource conservation
- Avoid excessive water consumption.
- Energy efficient techniques must be adopted
- Proper site restoration after construction
- Tree plantation at designated green areas
- Emergency preparedness

4 Alternatives Consideration

The assessment for the proposed pharmaceutical unit includes a detailed evaluation of project alternatives to ensure environmentally sustainable and socially responsible development. The alternatives have been examined with the intent of minimizing adverse impacts while meeting the core objective of providing affordable and planned housing.

Alternative assessment plays a vital role in promoting more effective decision-making by identifying potential environmental and social implications at the earliest stage of planning. The alternatives considered encompass site selection, design and layout planning, environmental integration, and economic feasibility, with an emphasis on long-term sustainability and compliance with legal standards.

4.1 Site Alternatives

The proposed site for the pharmaceutical unit was selected based on a combination of legal, geographic, and urban planning considerations. The land (74925 Sqft) was earmarked for urban residential use and duly approved by the relevant Development Authority.

Alternative sites were not pursued for the following reasons:

- * The selected plot lies within the municipal limits, compatible with land use zoning and regional master planning guidelines.
- * Proximity to key infrastructure such as schools, hospitals, road networks, and public utilities supports integrated community living.
- * The land is non-agricultural, free from any protected ecosystems, water bodies, or heritage sites, thus minimizing ecological and cultural disruption.

Given these locational benefits and regulatory compatibility, no alternate site was found to offer similar viability and alignment with planning regulations.

4.2 Design and Layout Alternatives

Various design alternatives were evaluated during the planning phase of the pharmaceutical unit, focusing on operational efficiency, safety, environmental compatibility, and cost-effectiveness. The selected layout includes:

- Dedicated storage area with an impounding wall, ensuring safe containment in case of accidental leaks or spills.
- Allowing smooth vehicle circulation and efficient loading/unloading operations.
- Clearly defined parking, office, and utility areas to separate operational and administrative activities, enhancing safety and workflow.

Provision of open buffer zones and green areas to improve environmental quality and serve as safety setbacks in compliance with rules and Punjab EPA guidelines.

4.3 Environmental Alternatives

During the planning of the pharmaceutical unit, various environmental alternatives were considered to minimize potential impacts on air, soil, water, and nearby communities. These included:

- **Site Selection Alternatives:** Different locations were assessed to avoid ecologically sensitive areas, densely populated neighborhoods, and regions with groundwater vulnerability. The chosen site was selected for its safe distance from residential zones, accessibility to transportation routes, and minimal ecological sensitivity.
- **Technology and Equipment Alternatives:** Environmentally friendly and safer storage area with modern leak detection systems, pressure relief valves, and fire suppression mechanisms were preferred over conventional storage methods to reduce risks of leaks, emissions, and accidents.
- **Layout and Design Alternatives:** The final layout incorporated buffer zones, green belts, and impervious flooring in operational areas to reduce soil contamination and improve safety. Proper drainage and spill containment systems were included to mitigate any accidental releases.

- **Operational Alternatives:** Adoption of strict safety protocols, scheduled maintenance, and emergency response plans was preferred over less-regulated operational practices, ensuring better environmental protection.

4.4 Economic Alternatives

To enhance the project's economic viability and community benefits, several cost-effective and resource-efficient strategies were selected over conventional methods:

- * **Energy-Efficient Street Lighting:** Adoption of LED lighting reduces operational energy use.
- * **Water Conservation Measures:** Provision for rainwater harvesting and water-efficient plumbing fixtures.
- * **Job Creation:** The project supports employment for engineers, architects, laborers, and service providers, stimulating the local economy.

These economic considerations not only reduce project costs but also provide long-term social returns, making the selected approach more sustainable and inclusive.

5 PROJECT DESCRIPTION

This Chapter presents the detailed project description along with project cost, land acquisition, implementation schedule, workforce and water requirements, etc.

5.1 Objective of Project

The main objectives of the project are:

- ✓ Enhance healthcare accessibility by producing affordable and reliable pharmaceutical products locally.
- ✓ Reduce dependence on imported medicines and promote self-sufficiency in drug production within Pakistan.
- ✓ Ensure compliance with Good Manufacturing Practices (GMP) and regulatory standards for product safety and quality.
- ✓ Support the national healthcare system by meeting the growing demand for life-saving and preventive medicines.
- ✓ Encourage research, innovation, and technology transfer in formulation and production processes.
- ✓ Generate employment opportunities and contribute to the socio-economic development of the region.
- ✓ Promote environmentally sustainable production practices through efficient waste management and pollution control measures.
- ✓ Facilitate export potential by producing pharmaceutical products that meet international market requirements.

5.2 Location & Site Layout

5.2.1 Site Location

The proposed pharmaceutical unit, Horizon Pharma (Pvt) Limited, is in the industrial area of District, Punjab. The project area spans approximately 74925 Sqft. It is:

- Accessible via main Road.

- Away from existing residential areas, educational institutions, and commercial zones.
- Free from ecologically sensitive areas, flood plains, and heritage zones.
- The land is non-forested, non-agricultural, and zoned for residential use. This ensures compliance with local zoning regulations and land use policies.

5.2.2 Site Coordinates

The GPS coordinates of the project site are 31.262269 N, 74.176324 E site location map is attached in next.

5.3 Land use of the site

The surrounding land is currently used for commercial purposes that align with the required land use.

5.4 Road Access

The proposed project site is well-connected through paved roads, specifically providing direct and reliable access to the area. This road infrastructure is vital for facilitating the transportation of construction materials, machinery, and workforce during the development phase, and will also support smooth vehicular access. The road access enhances the project's feasibility and aligns with sustainable planning objectives. A detailed road access map is included to illustrate the site's connectivity with the surrounding transport network.

Figure 2 Rod Access Map

Sure

5.5 Vegetative Features of Site

The project site features sparse to moderate vegetation, primarily consisting of native grasses, scattered shrubs, and a few trees like kikar and sheesham. No rare or protected plant species are present, and the area has historically been used for intermittent agriculture.

5.6 Plantation Plan

To enhance environmental sustainability and aesthetic appeal, the proposed project includes the plantation of approximately 1,000 to 2,000 trees and shrubs within and around the site. The plan emphasizes shade-providing, ornamental, and native species, ensuring long-term ecological balance and improved air quality.

5.6.1 Key Features

Boundary Plantation: Fast-growing, pollution-tolerant species such as Neem and Peepal will be planted along the perimeter for screening, dust control, and noise reduction.

Ornamental Trees and Shrubs: Selected for visual appeal, seasonal flowering, and biodiversity support.

Native Species Priority: Focus on low-maintenance, drought-tolerant plants suited to climate.

5.6.2 Maintenance Plan

- **Watering:** Efficient irrigation to meet species-specific needs and minimize water wastage.
- **Pruning & Trimming:** Regular maintenance to ensure healthy growth and landscape aesthetics.
- **Annual Evaluation:** Yearly health assessments with prompt replacement of dead or unhealthy plants.

5.6.3 Landscaping Considerations

- **Sustainability:** Use of natural fertilizers and drought-resistant species to reduce resource consumption.

- **Seasonal Variety:** Integration of flowering plants for year-round color and visual interest.
- **Soil Health:** Maintenance of fertility using organic methods to support long-term plant growth.

Recommended Species

S. No.	Common Name	Scientific Name	Benefits
1.	Neem	<i>Azadirachta indica</i>	Air purification, drought-tolerant
2.	Peepal	<i>Ficus religiosa</i>	Shade-providing, improves air quality
3.	Kikar	<i>Acacia nilotica</i>	Native, soil enrichment, fast-growing
4.	Shisham	<i>Dalbergia sissoo</i>	Timber value, soil stabilizer
5.	Siris	<i>Albizia lebeck</i>	Fast-growing, nitrogen-fixing
6.	Dherek	<i>Melia azedarach</i>	Ornamental, pollution control
7.	Bakain	<i>Melia azadirachta</i>	Aesthetic, hardy tree
8.	Mulberry	<i>Morus alba</i>	Provides shade, supports bird habitat
9.	Amaltas	<i>Cassia fistula</i>	Seasonal flowers, ornamental
10.	Bottlebrush	<i>Callistemon citrinus</i>	Attractive flowers, pollution absorber

5.6.4 Plantation Impact Assessment

The proposed pharmaceutical unit project site consists mainly of open land with limited existing plantation, including a few scattered shrubs and small trees. Satellite imagery and on-site observations confirm that no density or structured plantations currently exist within the project boundary. However, green patches are visible in surrounding areas, particularly toward the northeast and southeast.

Potential Impacts:

Vegetation Disturbance: Minor vegetation may be removed during land development, especially in zones designated for infrastructure such as roads and utilities.

Dust Emissions During Construction: Dust generated from earthworks, vehicle movement, and material handling may temporarily affect surrounding greenery, particularly during dry or windy conditions.

Soil Compaction: Heavy machinery could compact soil, potentially affecting soil fertility and plant growth in adjacent areas.

Mitigation Measures:

- ✓ Controlled and phased clearing of vegetation, preserving mature trees where feasible.
- ✓ Frequent water sprinkling during construction to suppress airborne dust.
- ✓ Use of green mesh barriers around the construction area to protect adjacent green patches.
- ✓ Post-construction plantation of native, shade-giving, and pollution-tolerant species along internal roads, plot boundaries, and open spaces.
- ✓ Development of green belts and community parks within the scheme to enhance overall greenery and reduce environmental footprint.

5.7 Magnitude & Cost of Project

The Proposed project spans a total area of, marking it as a significant urban development initiative in the region. The project carries an estimated total capital investment of 110 million PKR, covering land development, infrastructure construction, utilities installation, and operational setup. The financial plan includes all costs associated with ensuring operational safety and environmental protection, eliminating the need for separate allocations for these aspects. Strong emphasis will be placed on

the safe management of equipment and operations through rigorous and proactive practices. This integrated financial and operational planning underscores the project's commitment to both economic viability and environmental responsibility.

5.7.1 Cost Breakdown

Amenities	Cost
Land Cost	35 million
Infrastructure development, water supply, boundary walls, electric supply, roads etc.	20 million
Machinery & Equipment	30 million
Raw material and initial stock	10 million
Environmental Management and Monitoring Plan	10 million
Tree Plantation	01 million
Others	04 million
Total Cost	110 million

5.8 Proposed Schedule of Implementation

Stage I: Preliminary Phase

During the initial phase, the project site will be cleared, surveyed, and prepared for development. Feasibility studies, soil testing, and site planning will be undertaken along with preparation of preliminary project documentation and mobilization of construction resources

Stage II: Design and Approval Phase

Detailed engineering design of the pharmaceutical production building, utility systems (HVAC, water purification, power, and waste systems), and layout of process areas will be completed. Concurrently, necessary approvals and NOCs will be obtained from the Drug Regulatory Authority of Pakistan (DRAP), Punjab EPA, and local development authorities.

Stage III: Construction and Infrastructure Development Phase

This phase includes civil construction of production halls, administrative block, warehouse, and utility areas. Installation of internal roads, water and power supply, drainage systems, and effluent treatment facilities will also be completed during this period.

Stage IV: Equipment Installation, Testing & Operations Start

Installation of production machinery, quality control laboratory equipment, HVAC systems, and safety infrastructure will be carried out. This will be followed by system testing, validation, and trial production runs. Staff recruitment and training will also take place, leading to commissioning and commencement of official operations of the Pharmaceutical Unit.

Table 2 Schedule of Implementation

ACTIVITY	TIME FRAME					
	Four Week	Four Week	Four Week	Four Week	Four Week	Four Week
Preliminary Phase						
Design Phase						
Approval Phase						
Construction Phase						
Infrastructure Development						
Equipment Installation & Testing						
Safety Inspection & Trial Runs						
Commissioning & Operations Start						
Commissioning & Operations Start						

5.9 Description of Project

5.9.1 Project Overview

The Horizon Pharma (Pvt) Limited Pharmaceutical unit, located at Kot Khewat No. 608, Khatooni No. 161, 162, Khasra No. 253, 254, 289, Mouza Bucheki, Tehsil Raiwind, District Lahore, Punjab, is a planned residential community designed to meet the growing demand for quality urban living. Spanning 74925 Sqft.

5.9.2 Area Breakdown

Table 3 Features of Pharmaceutical unit

Sr. #	Description of area	Area
1)	Total Covered Area	53854 Sqft
2)	Total Open Area	21071 Sqft
3)	Total Area of Plot	74925 Sqft

5.9.3 Process Description

The purpose of proponent is to establish a pharmaceutical unit to fulfill the basic needs of local community and to provide cost efficient products. The basic details of the process are given below:

General Description

1. Raw Material Procurement and Quality Control

All Active Pharmaceutical Ingredients (APIs) and excipients are procured only from approved, validated suppliers. Each batch of raw material undergoes chemical and microbiological testing in the Quality Control (QC) laboratory before use. Only approved materials are released for production.

2. Weighing and Dispensing

Raw materials are weighed accurately according to the Master Formula Record (MFR) under controlled environmental conditions. Dispensing is done in dedicated areas to avoid cross-contamination.

3. Mixing / Granulation

Ingredients are blended or granulated (for tablets) using high-speed mixers or fluid bed processors to ensure uniform distribution of APIs. Wet or dry granulation techniques are applied depending on the product formulation.

4. Drying and Milling

Wet granules are dried in a fluid bed dryer to achieve the required moisture content. Dried granules are sieved or milled to ensure uniform particle size and flow properties.

5. Compression / Encapsulation

Dried granules are compressed into tablets using rotary tablet presses or filled into capsules using capsule-filling machines. In-process controls (weight, hardness, disintegration time) are performed at regular intervals.

6. Coating (if applicable)

Tablets requiring protection or controlled release are coated in perforated coating pans with film or enteric coatings.

7. Sterile Formulation

For sterile dosage forms, compounding and filtration are done in classified cleanrooms under aseptic conditions. Solutions are sterilized by autoclaving or filtration, filled in vials or ampoules, and sealed and labeled immediately.

8. Packaging and Labeling

Finished products are packed using automated blistering or bottling machines. Labels include batch number, manufacturing/expiry dates, and DRAP registration number. Packaging material is also quality-checked for integrity and compatibility.

9. Storage and Distribution

Finished products are stored in temperature- and humidity-controlled warehouses. Products are distributed to the domestic and export markets under Good Distribution Practices (GDP).

5.10 Available Facilities

1. Workforce

Manpower demand estimation is an essential component to facilitate deployment of manpower. Project will be constructed in phases. Tentative workforce required for

proposed project during the construction phase will be about 35-50 workers/employees. Unskilled labor should be hired locally.

2. Source of Water

It is supposed that water tanks will be used by the contractor on the site for construction activities. The source of water during the operation phase for the proposed project will be the ground water.

3. Water requirement

The water consumption for construction phase is estimated to be 15,000 liters/day of the proposed Project.

4. Wastewater Generation and Treatment Mechanism

The wastewater generation is estimated to be 12,000 liters/day of the proposed Project. Wastewater treatment system will be installed.

5. Solid waste

The solid waste generation is estimated to be 150-250 kg/day which will be collected at designated place.

6. Power requirement / power source

The main source of electricity/electric power will be Water & Power Development Authority (WAPDA).

7. Health, Safety, and Environmental Controls:

The facility will implement standard operating procedures (SOPs) for hygiene, emergency response, and safety. All workers will be provided with personal protective equipment (PPE), and training will be conducted regularly. Fire safety measures will include extinguishers, alarms, and a dedicated open emergency assembly area within the site boundary.

8. Personnel Protective Equipment (PPE)

To safeguard workers during both construction and operational phases, the following personal protective equipment will be provided, tailored to the specific activities undertaken:

- Protective goggles
- Leather or rubber safety shoes
- Gloves
- Face masks
- Helmets
- Overcoats

These measures emphasize the project's dedication to maintaining high standards of workplace safety, environmental protection, and operational efficiency, aligning with best practices and regulatory requirements.

5.11 Restoration and Rehabilitation Plan

The project is located within a residential area, but given the nature of the development, there are no significant concerns related to displacement or disruption to local residents. The project is designed to avoid the need for relocation or demolition of any existing structures, ensuring minimal impact on the surrounding community. Therefore, there is no immediate need for restoration, rehabilitation, or relocation. The development will proceed in alignment with sustainable practices within the designated area. Over its estimated 25-year operational lifespan, all civil structures and infrastructure will undergo periodic renovations to maintain operational efficiency and safety standards, without requiring extensive rehabilitation or affecting the residential community.

5.12 Safety Signs/Safety Boards

Safety signage plays a crucial role in accident prevention and risk communication at the workplace. These signs and symbols, designed to be easily understood by all employees, are essential for conveying important safety information and instructions. The project will ensure that safety signs, symbols, and boards are prominently

displayed across all departments, facilitating a culture of safety and awareness among workers and staff. This approach not only helps in mitigating hazards but also reinforces the project's commitment to maintaining a secure and health-conscious work.

5.13 Government Approvals and Leases

Compliance with environmental regulations is paramount, necessitating approval from the Environmental Protection Agency (EPA) of Punjab, as per Section 12 of the Punjab Environmental Protection (Amendment) Act 2012. The preparation of this report for submission to EPA Punjab is a critical step towards securing the necessary governmental endorsements to commence construction, underscoring the project's adherence to legal and environmental mandates.

6 DESCRIPTION OF ENVIRONMENT

An environmental baseline study is intended to establish a database against which potential impacts can be predicted and managed subsequently. The EIA of the project covers a comprehensive description of the project area, including regional resources which are expected to be affected by the project, as well as those which are not expected to be directly affected by the construction and operation of the project.

A site visit was conducted to survey the field area for collection of relevant data. Interviews were conducted with the public and stakeholders of the project area to seek the public opinion on the implementation of the project. Various Governmental and Non-Governmental Organizations (NGOs) were also visited for the collection of relevant data and their views on the project were recorded for incorporation into the EIA report. The environmental impacts of any activity or process will be assessed based on deviation from the baseline or normal situation. The following components form part of the baseline:

- Physical Environment
- Ecological Environment
- Socioeconomic Environment

6.1 Physical Environment

Lahore, second largest city of Pakistan and the capital of Punjab province. It lies 811 miles (1,305 km) northeast of Karachi in the upper Indus plain on the Ravi River, a tributary of the Indus. Akbar the Great held his Court in Lahore for 14 years from 1584 to 1598, and built the Lahore Fort, as well as the city walls which had 12 gates. Some of these still survive. Jehangir and Shah Jehan, the builders of the Taj Mahal in Agra and the Shalamar Gardens in Srinagar and Lahore, built palaces and tombs.

The last great Moghul Emperor, Aurangzeb (1658 - 1707) built Lahore's most famous monument, the great Badshahi Mosque. At that time the river Ravi, which now lies a

few miles away from Lahore, touched the ramparts of the Fort and the Mosque. A stream still flows there and is known as the "Old River".

6.1.1 Geographic Condition

The geography of Lahore Division comprises the various features relating to the land and climate. Lying between 31°15'–31°45' N and 74°01'–74°39' E, Lahore is bounded on the north and west by the Lahore District, on the east by Wagah, and on the south by Kasur District. The Ravi River flows on the northern side of Lahore. Lahore city covers a total land area of 1014 km² and is still growing.

Lahore Division enjoys air, rail, and road connections with the rest of the country. The capital of the Punjab, Lahore has Allama Iqbal International Airport to cater to the needs of District Lahore and its adjacent cities, as regular national and international flights run from here. Lahore Station is a major railway junction serving links to major cities. To the south of Lahore National Highway N-5 links Multan, on northwest and north runs Motorway M-1 and National Highway N-5 towards Gujranwala. On the west, it is linked with textile hub Faisalabad with a 4-lane highway, built on BOO (Built - Operate - Own) basis. A historical Grand Trunk Road which was a major artery during subcontinent era, originally built by Sher Shah Suri, the Afghan ruler, leads toward Indian border passing through the city.

6.1.2 Seismicity

Pakistan lies on an active seismic belt of earth. Seismic observations indicate that hundreds of shocks originate every year. Mostly, these seismic waves are of low intensity and do not have significant effect. According to seismic zones of UN- Habitat the project area falls under Zone 2B. The seismic zoning is shown in the figure.

Map 1 Seismicity map of Pakistan

6.1.3 Climate

Lahore features a five-season, semi-arid climate: foggy winter (Nov 15 - Feb 15) with few western disturbances causing rain; pleasant spring (Feb 15 - Apr 15); summer (Apr - Jun) with dust, rainstorms, and heat wave periods; rainy monsoon (Jul - Sep 16); and dry autumn (Sep 16 - Nov 14). The hottest month is June, where average highs routinely exceed 40°C (104°F). The wettest month is July, with heavy rainfalls and evening thunderstorms with the possibility of cloudbursts. The coolest month is January with dense fog.

Table 4 Climatic data of Lahore

Month	Mean Temperature Max	Mean Temperature Min	Precipitation	Relative Humidity
January	19.7	5.0	33.8	66.2
February	21.6	7.7	50.0	60.0
March	26.0	12.5	60.5	53.8
April	33.0	17.7	36.5	41.8
May	38.1	22.0	31.8	32.5
June	40.5	25.8	51.6	37.8
July	35.7	25.8	23.3	67.8
August	34.4	25.3	22.2	70.8
September	35.0	23.0	77.7	65.5

Signature

October	33.1	16.6	12.2	55.6
November	27.8	9.9	9.9	62.7
December	21.5	5.7	30.4	72.06.9
Annual mean	30.6	16.4	36.6	56.4

6.1.4 Temperature

The city’s highest maximum temperature was 48.3°C (118.9°F) recorded on May 30, 1944, while 48°C (118°F) was recorded on June 09, 2007. The lowest temperature recorded in Lahore is -1°C, recorded on 13 January 1967.

6.2 Ecological/Biological Environment

In this the baseline environmental conditions pertaining to biological environment are described. These conditions have subsequently been used to identify the potential impacts on the biological environment that are likely to arise from the project activities. A variety of vegetables are also grown in the district.

6.2.1 Flora

The Floral species commonly found in the area are:

Table 13 List of plants

Local Name	Scientific Name
Sufaida	Eucalyptus camaldulensis
Toot	Morus alba
Sukh chain	Pongamia glabra
Pipal	Ficus religiosa
Babul	Acacia nilotica
Citrus	Citrus sps
Mango	Mangifera Indica
Guava	Psidium guajava
Lychee	Litchi chinensis
Mulberry	Morus alba
Banana	Musa acuminata
Jamun	Syzygium cumini

Table 14 List of Vegetation

Local Name	Scientific Name
Chilies	Capsicum frutescens
Onion	Allium Cepa
Potato	Solanum tuberosum
Tomato	Solanum lycopersicum
Cabbage	Brassica oleracea
Water chestnut	Eleocharis dulcis

6.2.2 Fauna

Owing to industrialization, there is very little wildlife in the district. Wild boar, jackals, and hare, however, are still found in the riverine tracts. Fauna of the project area consists of:

- Mammals
- Reptiles
- Amphibians
- Birds

Table 15 List of Birds

Local Birds Name	Scientific Name
Falcon	Falconiformes
Eagle	Accipitridae
Quails	Coturnix coturnix
Doves	Columbidae
Ducks	Anas Platyrhynchos

Table 16 List of Mammals

Local Mammals Name	Scientific Name
Jackal	Canis aureus
Jungle cat	Felis chaus
Hog deer	Axis porcinus
House rat	Rattus rattus
Indian hare	Lepus nigricollis

Table 17 List of Reptiles

Local Reptiles Name	Scientific Name
Snake	Serpentes
Lizards	Lacertilia

6.3 Socio Economic Environment

The project site is in commercial area, hence direct disturbance to communities will be minimum from the project activities. However, the physical extent of the study area extends up to 5km surrounding the proposed site (referred as project area) considering the physical, ecological, and socioeconomic boundaries beyond which the project is not likely to significantly influence local communities, and with a view of covering a substantial sample size for collection of reliable and authentic socio-economic data.

6.3.1 Study Objectives

The socio-economic study undertaken for the Initial Environmental Examination (IEE) was designed and conducted to meet the following objectives:

- To assess the human environment of the area i.e., to determine the Quality of life of communities within the Region of Influence.
- To have an insight into the day-to-day activities of people especially focusing on their income generating activities viz., agriculture and labor.
- To assess the vulnerabilities of the local communities and the effects of project activities on their Quality of Life and Consultation with communities regarding the proposed project activities and to find out their concerns and aspirations.

6.3.2 Methodology

Data was collected from census reports, previous studies, and data from government departments as well as from field survey carried out in the surroundings of the Project area.

Our field survey methodology includes transect walks through villages, group interviews and focus group discussions with the local communities. The use of a semi-structured interview guide helped in the carrying out of the questioning process and recording of information. This activity was carried out with the objective of obtaining a clear and complete understanding of the social and economic conditions of the local communities; assessing the vulnerability of the local communities; identifying marginalized strata of the community; and gathering local concerns and inhibitions.

6.3.3 Religion, Caste, and Language

Religion plays an important role in the social structure of the society. Approximately 95% of Muslims live there and other are Ahmadis and Christians. The most common language used in this area is Punjabi (97.7%). Other languages like Urdu, Pushto and Seraiki are also well-known.

6.4 Quality of Life

The project area is better as compared to the other rural areas of the province. A brief account of the education, health, infrastructure, and markets of the area is as follows:

6.4.1 Education

The level of literacy is 66% in which male literacy rate is 71% while female literacy rate is 62%. Though there are higher secondary government schools, private sector schools and colleges for girls and boys are also available near the vicinity of project area.

6.4.2 Health Facility

Basic Health Unit, Dispensaries and Private clinics exist in the surrounding of the project area. People also access to private hospitals in district and sometimes to nearby private dispensaries.

6.4.3 Economy of area

District Lahore is an industrial and commercial city having multi-occupations. The population of the area is having different occupation including government and private services as well as agriculture. The women also assist their men in the economic activity in different fields of business, service, education, and other institutions. Women mostly serve in schools, colleges, and hospitals.

Lahore is generating many employment opportunities for its locals and outsiders. Industrial areas are using manpower, while nearby towns are providing business opportunities to the residents. In this semi urban area, people are involved in daily wages jobs, while some are involved in small business. They normally travel to adjacent areas for work. Some work in the industrial area and in the surrounding universities and colleges. People are also involved in agriculture. Area having access to irrigation water is another source of income. As per the 1998 Census (2017 Census data has not been made public), the industrial sector employs nearly 9.5% of the district's total population. However, agriculture with its allied livestock breeding and fishing is still the main employer, with 29.6% of the total population employed in this sector.

6.4.4 Agriculture

Agriculture is one of the most important economic activities in the project area. Agriculture and its allied livestock breeding are the main occupation of the rural areas of the district, with nearly 35.9% of just the rural population engaged in this occupation.

Sugarcane, wheat, rice, bajra, barley, gram, cotton, groundnut, and tobacco are the main crops grown in the district. Citrus, mangos, bananas, guavas, leeches, jaamun, phalsa and mulberry are some of the fruits grown in the district. Chilies, onions, potatoes, tomatoes, coriander, turmeric, garlic, peas, carrots, cauliflower, cabbage, turnip, okra, garlic, radish, pumpkins, sweet potatoes, water chestnut, bitter gourd, bottle gourd, and brinjal are the vegetable crops of the district.

7 IMPACTS AND MITIGATION MEASURES

This chapter provides a review of the potential impacts of the pharmaceutical unit located at Kot Khewat No. 608, Khatooni No. 161, 162, Khasra No. 253, 254, 289, Mouza Bucheki, Tehsil Raiwind, District Lahore over an area of 74925 Sqft. The estimated cost for the subject project will be about 110 million PKR. These impacts could be both positive and negative and have been classified accordingly by a thorough review of the construction and operational phases of the project. This assessment numerates the magnitude of these impacts with the aid of environmental checklist and presents effective mitigation measures to counter their adverse nature.

7.1 Purpose of Environmental Mitigation Measures

Environmental mitigation measures are essential for ensuring the sustainable operation of the asphalt manufacturing unit, aligning with environmental compliance, and safeguarding ecological integrity. The rationale behind these measures is dissected through a series of critical inquiries:

1. Identification of the Problem

The core issue arises when environmental resources are exploited unsustainably, leading to significant degradation. Such exploitation diminishes the environment's resilience and carrying capacity, severely impeding its natural recovery processes. In the context of the proposed project, this could manifest as pollution, habitat disruption, or resource depletion, directly impacting the local ecosystem's health and functionality.

2. Timing for Addressing the Problem

The environmental impacts of the project will become apparent from the onset of construction activities and continue throughout the operational phase. These effects are not confined to the project site but may extend to surrounding areas influenced by project activities. Early identification and timely intervention are crucial for

preventing long-lasting or irreversible damage. Mitigation efforts should be initiated at the planning stage and integrated into all phases of the project lifecycle.

3. Location for Mitigation Efforts

Mitigation strategies should be applied at the source of the environmental impact. This means implementing measures directly within the project site and, as necessary, in adjacent areas that might be affected by project-related activities. Focusing on the origin of potential problems ensures targeted and effective mitigation, reducing the overall environmental footprint of the project.

4. Approach to Addressing the Problem

Addressing environmental issues necessitates adopting eco-friendly practices and technologies throughout the project's development and operation. Mitigation plans should include:

- **Resource Efficiency:** Minimizing the use of natural resources and promoting recycling and reuse to reduce waste.
- **Pollution Control:** Implementing advanced pollution control technologies and practices to minimize emissions, effluents, and waste generation.
- **Habitat Protection:** Avoiding or minimizing impacts on natural habitats and biodiversity, including the development of green belts and conservation areas.
- **Community Engagement:** Involving local communities and stakeholders in decision-making processes to ensure that mitigation measures address their concerns and benefit the local environment and population.
- **Monitoring and Compliance:** Establishing rigorous monitoring systems to assess the effectiveness of mitigation measures and ensure compliance with environmental regulations.

7.2 Impact Identification Methodology

The methodology for identifying potential environmental impacts associated with the proposed facility involves a comprehensive approach. It includes:

Review of Project Activities: Detailed examination of all phases of the project to understand the range of activities and their potential environmental interactions.

Environmental Study: Assessment of the surrounding environment to identify sensitive areas, ecological value, and any existing vulnerabilities.

Literature Review: Analysis of existing studies, reports, and publications related to similar projects to draw parallels and learn from past experiences.

Expert Judgment: Utilization of insights from environmental experts to predict potential impacts based on their expertise and knowledge of similar projects.

7.3 Approaches for Mitigation Measures

Mitigation of environmental impacts involves several strategies:

- * **Avoid:** Altering project plans such as route or site adjustments to protect ecological or archaeological features.
- * **Replace:** Creating equivalent ecological habitats elsewhere if the original habitat is disturbed.
- * **Reduce:** Implementing measures like filters, cyclones, noise barriers, and visual screening to lessen impacts.
- * **Restore:** Rehabilitating the site post-operations to their original state or better.
- * **Compensate:** Providing support to displaced communities or individuals through relocation, facilities, or financial means.

7.4 Impacts and Mitigation Measures due to Location

Development will permanently alter the existing land use from open land to urban residential and commercial usage, impacting the rural character of the area. Construction activities will generate dust and noise, potentially affecting nearby communities and air quality temporarily. Movement of construction materials and, later, residential traffic could increase congestion on local access roads.

Mitigation Measures

Allocate green areas, parks, and open spaces within the project to maintain environmental balance. Sprinkle water on unpaved areas during construction to control dust emissions. Use noise barriers or schedule high-noise activities during daytime hours to minimize disturbance. Ensure that construction machinery is fitted with appropriate noise suppression equipment. Implement landscaping plans that use native tree and shrub species.

7.5 Impacts and Mitigation Measures in Construction Phase

i. Air Pollution

Impacts:

During the construction phase, significant dust emissions are expected from activities such as land clearing, excavation, movement of vehicles, and material handling. Construction machinery powered by diesel engines will also release particulate matter (PM), carbon monoxide (CO), and nitrogen oxides (NOx) into the atmosphere, potentially deteriorating local air quality. Dust may cause respiratory problems among workers and nearby residents if left uncontrolled.

Mitigation Measure:

Dust emissions, one of the major concerns, will be controlled through regular water sprinkling on all unpaved roads, open construction sites, and storage areas, particularly during dry and windy conditions. Additionally, construction material transport vehicles will be covered with tarpaulin sheets to prevent dust dispersion. Machinery and equipment will be regularly maintained to ensure that emissions remain within permissible limits, reducing air pollution.

ii. Noise Pollution

Impacts:

Construction activities, including excavation, operation of heavy machinery, and material transport, will generate high noise levels, potentially affecting the quality of

life of nearby residents and creating stressful working conditions for laborers. Prolonged exposure to elevated noise levels can cause hearing loss and increase stress.

Mitigation Measure

Noise pollution will be mitigated by limiting noisy construction activities to daytime hours, especially in proximity to residential areas. Construction machinery will be fitted with silencers and sound-dampening equipment to minimize noise levels. Workers will be provided with ear protection gear such as earmuffs and earplugs, and a noise monitoring program will be initiated to ensure compliance with National Environmental Quality Standards (NEQS).

iii. Soil Erosion and Degradation

Excavation, land leveling, and uncontrolled surface runoff during construction can cause soil erosion, leading to sediment deposition in local water bodies and loss of fertile topsoil. The disturbed soil surface becomes highly vulnerable to erosion by wind and water.

Mitigation Measures

To prevent this, temporary stormwater drainage channels and sediment control pits will be constructed around the site. Excavated soil will be stored properly with protective coverings to minimize erosion. Re-vegetation and re-compaction of exposed areas will be done promptly after construction activities to stabilize the soil.

iv. Water Pollution

Impacts:

During the construction phase, accidental spills of fuels, lubricants, and other hazardous substances could pollute nearby surface water resources or groundwater. In addition, improper disposal of wastewater from construction camps and equipment washing areas could contaminate water bodies.

Mitigation Measures

To mitigate this, all chemicals and fuels will be stored in designated areas with secondary containment. Mobile toilets and septic tanks will be provided for workers, and wastewater will be managed through proper drainage and treatment systems. Construction sites will be designed to minimize runoff carrying pollutants into natural drainage courses.

v. Solid Waste Generation

Impacts:

Solid waste will be generated from packaging materials, construction debris, leftover concrete, discarded steel, wood, and plastic materials. Improper disposal of such waste can create land pollution, visual nuisance, and health hazards.

Mitigation Measure:

A proper waste management plan will be implemented where waste materials will be segregated into reusable, recyclable, and non-recyclable categories. Authorized vendors will be hired for the collection, recycling, and disposal of waste. Efforts will also be made to reuse construction material, such as wood and scrap metal, to minimize waste generation.

vi. Occupational Health & Safety

Impacts:

The construction phase will expose workers to numerous health and safety risks, including falling from heights, injuries from machinery, exposure to hazardous chemicals, and accidents due to inadequate site safety. Without proper precautions, these risks could result in serious injuries or fatalities.

Mitigation Measure:

A comprehensive Health and Safety Management Plan (HSMP) will be developed and enforced. Workers will be provided with personal protective equipment (PPE) such as helmets, safety boots, gloves, high-visibility jackets, and safety harnesses. Regular

safety training sessions will be conducted, and first-aid kits and emergency medical services will be readily available onsite.

vii. Flora and Fauna Disruption

Impact:

Site preparation activities may require the removal of trees, shrubs, and other vegetation, leading to habitat loss for small wildlife species. The clearing of vegetation could also contribute to soil erosion.

Mitigation Measures:

To mitigate these impacts, vegetation clearance will be minimized as much as possible. Trees of significant ecological or aesthetic value will be preserved. After construction, compensatory plantation with native species will be undertaken to restore green cover and re-establish ecological balance in the area.

Basic Components	Duration	Location	Frequency	Extent	Significance	Nature

7.6 Impacts and Mitigation Measure During Operational Phase

i. Air Pollution

Impact:

During the operational phase of the pharmaceutical unit, air emissions may arise from diesel generators, HVAC systems, and vehicular movement. Minor emissions of volatile organic compounds (VOCs) or particulate matter may also occur during production, drying, and packaging operations if not properly controlled. These emissions could affect air quality and worker health.

Mitigation Measure:

High-efficiency air filtration and ventilation systems will be installed to capture and treat emissions. All process areas will be equipped with dust collectors and fume extractors. Generators and boilers will comply with Punjab Environmental Quality Standards (PEQS) for air emissions. Regular maintenance of machinery and vehicles will be ensured to minimize exhaust pollutants. Greenbelts with indigenous trees will be established around the facility to serve as natural air filters.

ii. Solid Waste Generation

Impact:

Solid waste will mainly consist of packaging materials, rejected or expired products, laboratory waste, and general office refuse. Improper disposal could result in environmental contamination and public health risks.

Mitigation Measure:

A comprehensive Solid Waste Management Plan will be implemented. Waste will be segregated at source into recyclable, non-recyclable, and hazardous categories. Recyclable materials (e.g., paper, cartons, plastics) will be sold to authorized recyclers. Hazardous and pharmaceutical waste (e.g., rejected batches, expired drugs, chemical residues) will be stored in labeled containers and disposed of through approved hazardous waste contractors in compliance with PEQS and DRAP guidelines..

iii. Wastewater Generation

Impact:

Wastewater will primarily originate from production processes, equipment cleaning, and domestic use. If discharged untreated, it may contaminate surface or groundwater resources.

Mitigation Measure:

A septic tank will be installed to treat domestic sewage generated at the facility. Treated effluent will comply with Punjab Environmental Quality Standards (PEQS) before discharge or reuse for landscaping. Regular maintenance and monitoring of the system will prevent leakages and contamination.

iv. Noise Pollution

Impact:

Noise may be generated from production machinery, compressors, generators, and transport vehicles, potentially affecting workers and nearby residents.

Mitigation Measure:

Acoustic insulation will be installed around noisy equipment and generators. Machinery will be maintained regularly to prevent excessive vibration or noise. Production and loading operations will be limited to daytime hours where possible. Green buffers and plantation around the boundary will help reduce noise propagation. Periodic noise monitoring will ensure compliance with PEQS.

v. Traffic Congestion and Safety Issues

Impact:

The increased number of vehicles during peak times and the movement of goods and service vehicles can lead to traffic congestion, road safety risks, and delayed emergency response.

Mitigation Measure:

The internal road network is designed with sufficient width, turning radii, and parking spaces to accommodate the anticipated traffic volume. Speed limits will be enforced through signage, speed breakers, and traffic calming measures. Dedicated pedestrian walkways and cycle tracks will be provided. A traffic management plan will be updated regularly based on changing traffic patterns.

vi. Visual and Aesthetic Impacts

Impact:

Neglected landscapes, unmanaged waste, and deteriorating public spaces could harm the visual appeal and livability of the pharmaceutical unit.

Mitigation Measure:

A regular maintenance schedule will be followed for parks, green belts, and public areas. Landscaping will use native and drought-resistant plant species for easy maintenance and year-round aesthetics. Strict enforcement of architectural controls and façade guidelines for commercial units will ensure uniformity and aesthetic appeal across the pharmaceutical unit.

7.7 Emergency Exits, Emergency Preparedness Plan, and PPE Details

1) Emergency Exits Details

- The facility will clearly mark emergency exits on all floors, ensuring at least two exits per production area.
- Fire-resistant doors will be installed to allow quick evacuation.
- Emergency exit maps will be displayed in key areas for easy navigation during evacuations.

2) Emergency Preparedness Plan

To ensure worker safety during emergencies, the unit will implement a structured Emergency Preparedness Plan, including:

a) Fire Safety Measures

- Fire alarms, sprinklers, and extinguishers will be installed at strategic locations.
- Regular fire drills will be conducted to train employees on evacuation procedures.
- Dedicated fire response teams will be trained to handle emergencies.

b) Chemical Spill & Hazardous Material Handling

- Chemical storage areas will be equipped with spill kits, absorbents, and neutralizers.
- Employees will be trained in chemical handling and spill response protocols.

c) Medical Emergencies & First Aid

- A fully equipped first aid station will be established within the facility.
- First aid training will be provided to staff, and medical response teams will be assigned.
- Emergency contact numbers and protocols will be displayed in all work areas.

3) Details of Personal Protective Equipment (PPE)

To minimize workplace hazards, employees will be provided with the following PPEs:

- **For General Safety:** Safety shoes, gloves, and protective clothing.
- **For Chemical Handling:** Chemical-resistant gloves, face shields.
- **For Air Quality Protection:** Dust masks and HEPA-filtered respirators for areas with air pollutants.
- **For Noise Reduction:** Earplugs or earmuffs in high-noise zones.
- **For Fire Safety:** Fire-resistant suits and gloves for designated personnel.

7.8 Environmental Enhancement Measures

Here are the environmental and safety measures:

- ✓ Workers will be trained in first aid and provided with medical facilities.
- ✓ Drugs and narcotics are prohibited during working hours.
- ✓ Machinery operators will wear proper protective gear.
- ✓ Water will be sprinkled on dusty roads and tracks.
- ✓ Personal Protective Equipment (PPE) will be provided during construction activities.
- ✓ Construction and domestic waste will be properly disposed of or utilized.
- ✓ Local communities will be informed in advance about construction work.
- ✓ Machinery will never be left unattended.
- ✓ Traffic management will be implemented to avoid disruptions, and overloading will be prohibited.
- ✓ Safety signs and boards will be displayed during construction.
- ✓ Standard Operating Procedures (SOPs) will be followed, along with Health, Safety, and Environmental (HSE) conditions.
- ✓ Native plants will be used to restore the area, and a tree plantation plan will be created.
- ✓ Solid waste will be handed over to contractors with an agreement.
- ✓ Noise levels will be controlled using appropriate measures.
- ✓ PPE will be provided to all workers.
- ✓ First aid facilities will be available at the site.

- ✓ All possible measures will be adopted to ensure the project is safe and environmentally friendly.
- ✓ Detailed planning for occupational health and safety (OHS) mitigation measures will be implemented.
- ✓ Employees will be trained in Environmental, Health, and Safety (EHS) policies and practices.
- ✓ Environmental management and compliance monitoring will be strictly followed.

8 ENVIRONMENTAL MANAGEMENT & MONITORING PLAN

The Environmental Management and Monitoring Plan (EMMP) is a crucial component of the project's overarching strategy to ensure environmental sustainability and compliance throughout the construction and operational phases of said project. The primary aim of the EMMP is to effectively manage and mitigate adverse environmental impacts identified in the report, promoting environmental stewardship and sustainable development practices.

8.1 Objectives of the Environmental Management Program

The objectives of the EMMP are multi-faceted, focusing on the comprehensive management of environmental aspects associated with the project:

- Defining Roles and Responsibilities
- Mitigation Measures
- Monitoring Mechanism
- Communication and Documentation
- Training and Capacity Building
- Management and Implementation

By addressing these objectives, the EMMP serves as a comprehensive guide for the project team to not only comply with regulatory requirements but also to adopt best practices in environmental management. This initiative-taking approach to environmental protection will help to minimize the project's ecological footprint, promote sustainability, and contribute positively to the local community and environment.

Table 5 Environmental Management Plan

Sr. #	Impacts	Mitigation Measure	Responsibility	
			Implementation	Monitoring
Construction Phase				
1.	<p>Soil Erosion & Contamination</p> <p>Due to the proposed construction activities, soil erosion and contamination may occur. Soil erosion may occur on roadside and excavation of earth/cutting operations whereas contamination of soil may be caused by oil and chemical spills at asphalt plant sites, equipment washing yards, camp sites and temporary construction site office. This impact is, however,</p>	<ul style="list-style-type: none"> • Excess spoil should be reused where possible and residual spoil can be disposed of at designated site to prevent erosion • Loss of topsoil can be avoided by stripping and storing topsoil prior to construction, then re-using it to cover the completed cell • Confining excavations to the specified spots as per the approved engineering drawings. Unnecessary excavations need to be avoided; 	Construction Contractor	Proponent

	temporary and low adverse in nature			
2.	<p>Air Quality and Dust</p> <p>Air quality will be affected by fugitive dust emissions from construction machinery; dust from the unpaved surface and construction vehicles. Emissions may be carried over longer distances depending upon the wind speed, direction, temperature of surrounding air and atmospheric stability. Besides, multifarious construction activities and increased vehicular traffic (construction vehicles) would also contribute to the</p>	<ul style="list-style-type: none"> • All vehicles, machinery, equipment and generators used during construction activities should be kept in good working condition and be properly tuned and maintained in order to minimize the exhaust emissions • Preventive measures against dust should be adopted for on-site mixing and unloading operations; • Construction materials (sand, gravel, and rocks) and spoil materials will be transported through trucks covered with tarpaulins and all vehicles (e.g., trucks, equipment, and other vehicles that support construction works) will comply with 	Construction Contractor	Proponent

	<p>localized airborne dust. The Suspended Particulate Matter (SPM) of the size smaller than 10 micrometre (PM₁₀) tends to remain suspended in the environment for much longer and persistent time and is an environmental hazard. The objectionable impacts of settling of the suspended dust would be its dry deposition on vegetation, motor vehicles, structures, and other exposed surfaces. Similarly, exhausts from generators can also have impacts on air quality in the vicinity. The deteriorated ambient air quality may cause health hazards to the residents of nearby</p>	<p>the PEQS for carbon emissions and noise;</p> <ul style="list-style-type: none"> • Regular water sprinkling of the site should be carried out to suppress excessive dust emission(s); • Emissions from power generators and construction machinery are important point sources at the construction sites. Proper maintenance and repair is needed to minimize the hazardous emissions 		
--	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--

	residential colonies. The overall impact on the quality of air during the construction phase will be high adverse, however, it will be temporary and limited to the project's implementation phase only.			
3.	<p>Visual Aesthetics & Landscape Changes</p> <p>Visual intrusion from large piles of excavated and construction material is one of the possible adverse impacts during the construction phase of the project. This impact is considered to be temporary and low adverse in nature.</p>	<ul style="list-style-type: none"> Material stockpiles should be removed as soon as work is completed and the area re-landscaped. During work, these stockpiles should be covered with tarpaulin and watered regularly. 	Construction Contractor	Proponent
4.	<p>Noise and Vibration</p>	<ul style="list-style-type: none"> The most common way to reduce the noise levels of common 	Construction Contractors	Proponent

	<p>The noise and vibration will be produced due to the operation of construction machinery equipment. Sources of noise and vibration during construction are heavy machinery. Noise and vibration are perceived as one of the most undesirable consequences of construction activity. The above machinery is expected to generate noise levels that would be severe in the Project Area. The noise and vibration may cause health hazards to the residents of nearby residential areas and sensitive receptors e.g. hospitals, educational institutes and mosques etc.</p>	<p>construction equipment is through worksite modifications.</p> <ul style="list-style-type: none"> • All workers who need to work within the zone must wear hearing protection 		
--	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--

sure

5.	<p>Solid Waste Generation</p> <p>Different type of waste is likely to be generated during the construction phase of the proposed Project. The municipal waste will be in the form of food, cans, paper and wastewater from construction camps toilets and washing yards. Construction waste will include excavated soil, sand, gravel, rocks, asphalt, pieces of concrete, bricks, wood, metal pieces and electrical wires. Whereas, hazardous waste can be comprised of paints and construction chemicals. All these, if left unattended, can become a</p>	<ul style="list-style-type: none"> • Waste disposal plan must be reviewed during the entire construction phase • Solid Waste generated during construction will be safely disposed in demarcated waste disposal sites and the contractor will provide a proper waste management plan; • Construction waste such as waste wood can be recovered and recycled into wood for new building projects, and cement, bricks, and plaster can be crushed and reused in other construction and building projects 	Construction Contractor	Proponent
----	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------	-----------

	source of nuisance and environmental pollution in the Project Area.			
6.	<p>Wastewater Generation</p> <p>Wastewater will be generated at the construction site by the workers. If the generated wastewater is not properly treated or disposed of, this may contaminate the surface water sources</p>	<ul style="list-style-type: none"> • Proper monitoring to check the compliance of PEQS will be carried out 	Construction Contractors	Proponent
7.	<p>Flora & Fauna</p> <p>No negative impact on the ecological environment will take place on account of cutting of any trees in the project area and clearing of vegetation from the site.</p>	<ul style="list-style-type: none"> • Trees and ornamental plants shall be planted along the project boundary which will increase the aesthetic value of the site and will combat pollution. • Landscaping seemed to be a powerful mitigation activity with a positive impact. 	Construction Contractors	Proponent
OPERATIONAL PHASE				

8.	<p>Air Quality</p> <p>During the operational phase of the Pharmaceutical unit, continuous vehicular movement, supply trucks, and customer vehicles may contribute to localized air pollution. Minor emissions of hydrocarbons may also occur and transfer operations if not properly controlled. Dust emissions from unpaved areas within the facility could also contribute to particulate matter (PM), potentially affecting workers and nearby communities.</p>	<ul style="list-style-type: none"> • Regular vehicle checks to control/ensure compliance with PEQS. Vehicles with excessive smoke emissions should be monitored and penalties should be imposed in case of non-compliance. • Roadside tree plantations as applicable and feasible under local climatic conditions. Plants should be selected in accordance to their ability to absorb emissions; 	Regular Monitoring	Proponent
9.	<p>Noise</p> <p>During the operational phase, the noise levels are</p>	<ul style="list-style-type: none"> • Penalties should be imposed for the use of vehicles having faulty silencers; and 	Regular Monitoring	Proponent

	<p>anticipated to increase mainly due to traffic related noise pollution and due to commercial activities in the Project Area.</p>	<ul style="list-style-type: none"> • People should be educated to promote using of less horns e.g. by placing signboards at road side 		
10.	<p>Wastewater</p> <p>Improper operation and maintenance of sewerage system may lead to illegal ingress of municipal solid waste into manholes/sewers, deposition of silt/sludge reducing capacity of sewers significantly, choking of sewer resulting in stagnant of wastewater in the streets or in low lying areas. Stagnant wastewater may cause inconvenience to pedestrians, foul smell,</p>	<ul style="list-style-type: none"> • Solid waste bins/containers should be placed at appropriate location along the roads and in streets to avoid entrance of solid waste into sewers. • Residents should be educated not to throw solid waste in wastewater sewers. • Installation of treatment plan for the treatment of wastewater 	Regular Monitoring	Proponent

sure

	unhygienic environment and health issues.			
11.	<p>Solid Waste</p> <p>Solid waste management is a critical issue in the operational phase. Improper management of solid waste and accumulation of solid waste due to non-collection give rise to various severe issues to environment and health. Presence of solid waste heaps results in degradation of soil and land, choking of sewers if got way, create obnoxious odour</p>	<ul style="list-style-type: none"> • An efficient and responsive general municipal solid waste collection, disposal, and management system should be strictly implemented • Waste bins should be provided at various convenient locations in the parks and the marketplaces for solid wastes by the passers-by. They should be regularly emptied and replaced, if found damaged and unserviceable. • Throwing of garbage and solid wastes onto greenbelts or vacant plots should be prohibited and fine should be imposed in the case of noncompliance 	Regular Monitoring	Proponent
12.	<p>Fauna</p>	<ul style="list-style-type: none"> • Maintenance of the green areas and the protection of saplings to ensure better environmental conditions 	Regular Monitoring	Proponent

	<p>There is no protected area, game reserve, game sanctuary, or national park in the project area so, no major impact on wildlife and livestock in the area is expected through noise, vibration, and any type of normal activity in the project area. This impact is Insignificant.</p>	<ul style="list-style-type: none"> • Use of fertilizers should be strictly monitored in order to avoid any incident. Natural nutrients should rather be preferred 		
--	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--	--

Restoration of work sites	Site cleared and no solid and construction waste along the alignment	<ul style="list-style-type: none"> • After completion of construction work 	<ul style="list-style-type: none"> • Contractor

8.2 Training of Workers

Prior to the commencement of project activities, an environmental and social training and technical support program will be implemented for Proposed project. This program is essential to strengthen institutional capabilities and ensure effective management of environmental and social aspects throughout the project lifecycle.

Building environmental awareness and providing relevant technical knowledge to the Contractor's workforce is crucial for the successful execution of the Environmental Management Plan (EMP). Without adequate training, the workforce may lack the understanding and skills necessary to implement the required environmental protection measures effectively.

Management will be responsible for engaging a Technical Assistance (TA) consultant to design and deliver comprehensive environmental and social training sessions.

The key objectives of the TA program will be:

- To assist in the development and establishment of effective environmental and social management systems;
- To deliver targeted training to senior management, contractors, subcontractors, and supervision consultants involved in environmental and social planning and management during both construction and operational phases; and
- To conduct specialized training modules covering monitoring techniques for air quality, water quality, and noise pollution.

Table 7 Training Schedule

Participants	Date, Time & Location	Training Topics	Schedule	Responsible Authority
Staff of project and the contractor	As specified	<ul style="list-style-type: none"> • Introduction to project EIA/IEE and EMMP • EMMP communication, documentation, monitoring, and reporting requirements 	Every month	Project Manager
All site personnel	As specified	<ul style="list-style-type: none"> • Site induction training on HSE system and requirements at Incinerating Site • Environmental sensitivities of the project area • Communication of environmental problems to corresponding officials 	After every week	Project Manager
Drivers	As specified	<ul style="list-style-type: none"> • Road safety • Road restrictions • Vehicle restrictions • Waste disposal. • Defensive driving 	After every 3 months	Project Manager
Camp Staff	As specified	<ul style="list-style-type: none"> • Camp operations. • Waste disposal. • Good housekeeping 	Monthly	Project Manager

8.3 Environmental Management Team

The successful implementation of the Environmental Management and Monitoring Plan (EMMP) for the project hinges on the coordinated efforts of a dedicated environmental management team. This team comprises various functionaries, each with distinct roles and responsibilities throughout the construction and operational phases of the project.

8.3.1 Key Members of the Environmental Management Team:

Proponent:

Serves as the project proponent and owner of the Environmental Management Plan, overseeing its execution during both construction and operational stages.

Project Contractor(s):

Act as executors of the EMMP during the construction phase, responsible for integrating environmental mitigation measures into project activities.

Operational & Maintenance & Health, Safety, and Environment Team:

Execute the EMMP during the operational phase, ensuring ongoing compliance with environmental standards.

Environmental Protection Agency (EPA), Punjab:

Functions as the regulatory body for reviewing and monitoring the project's compliance with environmental remediation and mitigation measures outlined in the report.

8.3.2 Responsibilities of Functionaries:

a) Project Management:

Charged with overall environmental supervision, monitoring progress, overseeing mitigation measure implementation, documentation, training program development, and reporting on EMMP status.

b) Project Contractor

Responsible for adhering to all EMMP provisions, and environmental codes of conduct, and ensuring workers are equipped with and trained in the use of Personal Protective Equipment (PPE).

c) Environmental Protection Agency (EPA):

Reviews and monitors the project's adherence to the EIA's remedial and mitigation strategies.

8.4 Equipment Maintenance Details

A well-organized maintenance program is critical for ensuring the safety and efficiency of all tools, equipment, and vehicles used in the project. Regular inspections and adherence to safety regulations are mandatory to prevent accidents and injuries.

8.5 Proposed Environmental Monitoring

Environmental monitoring is vital for assessing the project's compliance with environmental regulations and its effects on the environment. It is divided into: Compliance Monitoring: Ensures the project's adherence to EIA and EMMP requirements through routine inspections and site monitoring.

Effects Monitoring: Identifies unanticipated impacts or those exceeding anticipated levels, allowing for the timely implementation of additional mitigation measures.

8.5.1 Monitoring Components:

Comprehensive baseline monitoring will be conducted across several key environmental parameters, including:

- Noise Levels
- Ambient Particulate Matter
- Ambient Air Gases
- Ground Water Quality
- Wastewater Quality
- Soil Contamination
- Solid Waste Management

- Vehicular Traffic and Emissions
- Flora & Fauna
- Health & Safety Practices
- Machinery and Equipment Maintenance

By establishing a robust environmental management framework, the project aims to minimize its environmental footprint, ensure the safety of its workers, and contribute positively to the local ecosystem and community.

8.6 Environmental Budget

Table 8 Environmental Budget

Environmental Component	Quantity	Amount Pak Rs.	Details/Basis
Landscaping/Plantation	1000-2000 approx.	1.5 million	Cost includes plantation and maintenance up to three years
Solid waste management	L.S.	1.5 million	Lump Sum
Health & Safety Measures	L.S.	0.5 million	Lump sum
Wastewater management	L.S.	1.5 million	Lump sum
Miscellaneous Cost	L.S.	02 million	Lump sum
Air Quality Monitoring	2	12,000	2 samples @ 6000/sample
Water Quality Monitoring	2	12,000	2 samples @ 6000/sample
Noise Level Monitoring	2	10,000	2 samples @ 5000/sample
Soil Tests	2	10,000	2 samples @ 5000/sample
Training		15,000	Lump sum
External Monitoring		100,000	
Total Environmental and Social Management Cost		09 million PKR	

9 STAKEHOLDER CONSULTATION

Stakeholder consultation is a critical component in the environmental assessment process for the proposed project. It fosters communication among diverse groups, facilitating information exchange, feedback collection, and collaborative decision-making.

9.1 Benefits and Objectives of Stakeholder Consultation

Engaging with stakeholders offers several advantages, including improved project understanding, identification of environmental concerns, and incorporation of local insights into project planning. Key objectives include:

- **Enhancing Understanding:** Clarifying the project's aims and potential impacts to ensure stakeholders are well-informed.
- **Addressing Concerns:** Identifying and resolving stakeholder issues to prevent opposition and build consensus.
- **Building Trust:** Establishing a foundation of trust and cooperation between the project Proponent and stakeholders.
- **Informed Decision-Making:** Leveraging stakeholder input to make informed decisions regarding project design and implementation.

9.2 Identification and Classification of Stakeholders

A comprehensive stakeholder identification process was undertaken to recognize all parties with a personal stake in the project, classified as:

- **Industries:** Businesses and institutions directly affected or influential to the project outcome.
- **Local Communities:** Residents and groups in proximity to the project site are likely to experience its direct impact.

9.3 Views, Concerns, and Suggestions of Various Stakeholders

Stakeholder feedback highlighted several areas of concern and interest:

- **Environmental Preservation:** Emphasis on minimizing tree removal and establishing green zones.
- **Local Employment:** Dedicated support for prioritizing local residents in hiring processes.
- **Dust and Air Pollution Control:** Recommendations for regular dust suppression measures and continuous air quality monitoring.
- **Noise Management:** Suggestion to limit noise-generating activities to daytime hours.
- **Solid Waste Management:** Advocacy for proper waste disposal techniques to mitigate environmental impacts.

9.4 Methodology for Consultation

The consultation process involved a dynamic exchange of ideas through discussions, meetings, and field visits, aimed at:

- **Scoping Sessions:** Initial meetings to define project scope and identify key stakeholder concerns.
- **Focus Group Discussions:** In-depth conversations with local communities and government representatives to gather detailed feedback.
- **Location-Based Meetings:** Engagements held at various sites to ensure broad stakeholder participation and input.

This stakeholder consultation process underscores the project's commitment to environmental stewardship, community engagement, and sustainable development. By incorporating stakeholder feedback into the process, the project aims to achieve a balance between development objectives and environmental conservation, fostering positive relationships with all affected parties.

9.5 Environmental Management Team and Experts

Sr. #	Managers	Responsibilities
1.	Contract Manager	<ul style="list-style-type: none"> ● Implementation of EMP ● Environmental issues identification during pre-construction phase. ● Communication EMP to all employees.
2.	Contractor	<ul style="list-style-type: none"> ● Ensure that the control measures identified during environmental surveys are implemented as they are relevant to their work/visit. ● Ensure that the project management team is notified of any non-conformance of control measures or environmental incidents where the environment has been put at risk.
3.	Site Manager	<ul style="list-style-type: none"> ● Ensure site material and safe handling of hazardous waste. ● Controlled access arrangement to avoid hazards. ● Emergency egress arrangements to avoid any unfortunate incident. ● First aid facilities/services should be readily available on-site.
4.	Site HSE Advisor	<ul style="list-style-type: none"> ● Ensure good standards of workmanship. ● Engaged health and safety to devise site waste management plan to be followed and implemented. ● Daily checks & weekly checks. ● Regular consultation with workers.
5.	Site Environment Advisor	<ul style="list-style-type: none"> ● According to legislation and consent develop EMP. ● Ensure application of EMP. ● Conduct regular site inspection.
6.	Public Contact Officer	<ul style="list-style-type: none"> ● First point of contact for members of the public. ● Arrange and manage public forums. ● Maintain relation with stakeholder

9.6 The Responsible Authority for EMP Implementation

The successful implementation of the Environmental Management Plan (EMP) is a pivotal aspect of ensuring the environmental integrity and sustainability of the proposed unit. The ultimate responsibility for overseeing and ensuring the effective execution of the EMP lies with the project Proponent.

Appointment of an HSE/Project Manager

To facilitate this, the project Proponent will appoint a Health, Safety, and Environment (HSE)/Project Manager possessing the necessary qualifications and expertise. This individual will assume the role of Environmental Manager, tasked with the comprehensive management of all health, safety, and environmental conditions as per the Punjab Environmental Quality Standards (PEQS).

Responsibilities of the HSE/Project Manager

As Environmental Manager, the HSE/Project Manager's responsibilities will encompass a broad spectrum of duties, designed to ensure that the project not only complies with all relevant environmental regulations but also adopts best practices in environmental stewardship.

9.7 Environmental Practitioners and Experts

Consultation with Environmental Practitioners and experts was done, and the following comments and suggestions were noticed.

Table 9 Environmental Consultant Team

Sr. No.	Name	Designation	Comment/ Suggestions
1.	Sara Fatima	Senior Environmentalist	<ul style="list-style-type: none"> • She said that the project will have a positive impact on the economy, but its construction should be done in an environmentally friendly way. • Basic facilities should be provided to local community

2.	Zia Ur Rehman Farooqi	Ph.D. Scholar Environmental Sciences	<ul style="list-style-type: none"> • Tree plantation in designated green zones should be conducted. • Proper disposal of the solid waste • HSE management measures should be adopted and implemented effectively
3.	Dr. Hina Ahmed Malik	Ph. D Environmental Sciences	<ul style="list-style-type: none"> • He said that locals should be preferred for employment. • Value addition of area. Proper mitigation measures must be adopted while construction and operation of this project
4.	Engr. Kanza Fatima	Junior Environmentalist	<ul style="list-style-type: none"> • Waste must be collected and disposed of properly. • Ensure the use of PPE's during the operational activities. • Wastewater should be treated. • Ensure the tree plantation
5.	Engr. Aleeza Kanwal	Junior Environmentalist	<ul style="list-style-type: none"> • Health and safety department and trained people should be there in case of any emergency. • Periodic monitoring of every fire extinguisher (expiry date, type)
6.	Engr. M. Bilal	Environmental Engineer	<ul style="list-style-type: none"> • It should be ensured that the pollution abatement technique

9.8 Other Departments and Agencies

Following officers of government departments were consulted by the socio-environmental team of the consultants and concerned details about the project were noted down through personal interviews, group meetings, etc, in their offices, for instance.

Sr. No.	Designation	Concerns
1.	Environment Protection Department (EPD)	
	General Manager	<ul style="list-style-type: none"> • Solid waste should be managed in Environmentally friendly manner. • Wastewater should be treated effectively & approval should be acquired from concerned agency before disposing off in nearby drain. • HSE* at the site should be managed effectively. • No impact is being foreseen due to the selected location. • Locals should be given job opportunity.
	Environmental Inspector	
2.	Social Welfare Department (SWD)	
	Deputy Director Officer	<ul style="list-style-type: none"> • Final goods should be affordable for the locals. • The proposed product should facilitate locals and they should be economical. • Job opportunities should be given to the locals. • Wages should be given according to the work assigned to them. • Life insurance of the workers should be given as well as all the facilities should be given as per labor laws.
3.	Irrigation Department	
	Subdivision	<p>Following comments were suggested:</p> <ul style="list-style-type: none"> • Untreated wastewater should not be disposed of in the nearby drains without proper treatment. • Beneficial as job opportunities will be available to the residents.
	Executive Engineer	
4.	Forest Department	

	District Forest Officer	<p>Following recommendation were suggested by the forest department:</p> <ul style="list-style-type: none"> • Plantation and landscape activities should be conducted on a broader scale. • Proper drainage system must be available at site
--	-------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

9.9 Consultation with Affected and Wider Community

In addition, the use of direct methods to evince the response of the various stakeholders in targeted population residing in study area was ascertained by conducting a sample survey, through specially formatted questionnaires. Questions posed to the public were related to the creation of impacts, adverse impacts, and beneficial impacts, including employment opportunities, income generation activities, change in living standards and provision of the basic amenity.

Personal views of the respondents on the establishment of proposed project disturbance to the residents near the AOI and infringement of their privacy were also recorded. Various rounds of public meetings and consultations were arranged in the project and study area. The stakeholder category involves nearby residents, different industries, shopkeepers. The issues discussed with them are mostly related to the following:

- Activities of project.
- Impacts caused due to certain activities during construction and operational phase.
- The proposed mitigation measures.

10 RAINWATER HARVESTING SYSTEM

➤ **Design Consideration for Roof Tops**

- i. Collection surface => Rooftops
- ii. Storage Options => Rooftop Tanks
- iii. Filtration => sand-charcoal-gravel filter
- iv. Usage=> non-potable use (flushing, gardening)
- v. Capacity => Approx. 1000 liter per House

➤ **Design Consideration for Parks/ Open Spaces**

Design Option 1: Infiltration Trenches

- i. Purpose => Recharge groundwater, prevent flooding
- ii. Placement=> Along pathways and park boundaries
- iii. Design:
 - i. Trench width: 0.5-1.0 m
 - ii. Depth: 1.0-1.5 m
 - iii. Filled with coarse sand and gravel
 - iv. Covered with permeable soil or turf

Design Option 2: Recharge Pits

- i. Purpose => Collect stormwater from landscaped and paved areas
- ii. Size: 1 m × 1 m × 2 m deep
- iii. Filter Media: Brick bats, charcoal, gravel
- iv. Spacing: Every 500-1,000 m² of park area

11 CONCLUSION

The project aims at the development of pharmaceutical unit. The project falls under the category of projects requiring Environmental Impact Assessment (EIA).

At the end of this study, it has been found that:

- There are no sensitive elements/segments of environment around the project site.
- It has also developed ways and means for environmentally sustainable disposal of solid wastes to be generated from the project operations.
- The noise levels will be kept well within the required limiting values of the NEQS Pakistan.
- This project will create job opportunities during construction and operation stages leading towards reduction of poverty.
- Sewage will be passed through Septic Tanks before final treatment and disposal.
- It will help in the improvement of the community in the local area. It will also provide such facilities for people from other places.
- Project site means the development criteria like electricity supply, gas supply, water supply and sewage system.
- EMP, as recommended in this EIA Report, is to be put in place during all operational stages of the project.
- Environmental monitoring by the project proponent and a third party also ensures that the project will run in accordance with legal requirements.

Based on these findings of the EIA Report the project merits the issuing of Environmental Approval by the Environmental Protection Agency, Government of Punjab, and Lahore.

GLOSSARY

Accommodate	(of a building or other area) provide lodging or sufficient space for. "The cottages accommodate up to six people"
Assessment	The action of assessing someone or something. "The assessment of educational needs"
Aspects	A distinct feature or element in a problem
Adverse	- Preventing success or development; harmful; unfavorable. "Taxes are having an adverse effect on production"
Authorized	- having official permission or approval. "An authorized dealer"
Amendment	a minor change or addition designed to improve a text, piece of legislation, etc. "an amendment to existing bail laws"
Ambient Air	Ambient air quality refers to the quality of outdoor air in our surrounding environment. It is typically measured near ground level, away from direct sources of pollution
Archaeological	the scientific study of material remains (as fossil relics, artifacts, and monuments) of past human life and activities
Annunciation	A formal public statement
Baseline	The existing conditions against which impacts of the proposed action and its alternatives can be compared.
Crushing	Deform, pulverize, or force inwards by compressing forcefully. "You can crush a pill between two spoons"
Containers	An object for holding or transporting something. "The cakes will keep for up to two weeks if kept in an airtight container"
Compliance	Acting according to certain accepted standards
Discrepancies	A difference between conflicting fact, claims or opinions
Disposal	the action or process of getting rid of something
Dumped	Deposit or dispose of (rubbish, waste, or unwanted material), typically in a careless or hurried way

Effluent	Any material in solid, liquid or gaseous form or combination thereof being discharged from industrial activity or any other source and includes a slurry, suspension or vapor
Environmental impact statement (EIS)	A document prepared to analyze the impacts on the environment of a proposed action and released to the public for review and comment. An EIS must meet the requirements of NEPA, CEQ, and the directives of the agency responsible for the proposed action.
Emission	The production and discharge of something, especially gas, or radiation." The effects of lead emission on health"
Evaluated	Estimate the nature, value, quality, ability, extent or significance
Graded	Arranged in a sequence of grades or ranks; "stratified areas of the distribution"
Generation	The production or creation of something
Incinerator	A furnace or a container for burning waste materials
Inadequate	Not capable or competent; lacking
Implementation	The process of putting a decision or plan into effect; execution
Intends	To have in mind as something to be done or brought about, plan to design or mean for a particular purpose, use, recipient, etc.
Landfill site	for the disposal of solid waste in which refuse is buried between layers of dirt to fill in or reclaim low-lying ground
Legislation	Law enacted by a legislative body
Mobilization	To release or make available, as cells or chemical substances
Mitigation	The action of lessening in severity or intensity
Noise	Loud, unpleasant, unexpected, or undesired sound that disrupts or interferes with normal human activities
Potential	Having or showing the capacity to develop into something in the future

Pedestrian	A person who goes or travels on foot; walker
Proponent	The person who proposes or intends to undertake a project
Sanitary	Relating to the conditions that affect hygiene and health, especially the supply of sewage facilities and clean drinking water
Segregate	Set apart from the rest or from each other; isolate or divide. "Disabled people should not be segregated from the rest of society"
Settlement	An official agreement intended to resolve a dispute or conflict. "Unions succeeded in reaching a pay settlement"
Ton	A short or net ton is equal to 2,000 pounds; a long or British ton is 2,240 pounds; a metric ton is approximately 2 to 205 pounds
Transportation	The action of transporting someone or something or the process of being transported. "The era of global mass transportation"
Ultimate	Being or happening at the end of a process; final. "Their ultimate aim was to force his resignation"
Violations	the action of violating someone or something
Working place	From the out by side of the last open crosscut to the face
Flora	All the plant life in a particular region or period
Fauna	All the animal life in a particular region or period
Demarcated	Separately clearly, as if by boundaries
Screening	The display of a motion picture
Substitutions	An event in which one thing is substituted
Smelting	extract from its ore by a process involving heating and melting
Regulations	An authorized rule
Recycling	process of converting waste materials into new materials and objects
Stakeholders	A person or organization with an interest or concern in something
Rehabilitation	The conversion of waste land into land suitable for use of habitation or cultivation

Sociologist		
8	Ahmed Raza	M. Phil Sociology

TERMS OF REFERENCES

Terms of References (Tor) for the Environmental Examination process are designed to ensure compliance with the regulatory framework and facilitate a thorough review of the project's environmental implications. These terms are outlined as follows:

1. Review Fee Payment:

As stipulated in Regulation 7 of the Review of IEE and EIA Regulations, 2022, the proponent is required to submit a nonrefundable review fee to the Environmental Protection Agency (EPA) at the time of submitting the IEE/EIA report. The specific amount of this fee is determined by the rates specified in Schedule III of the regulations.

2. Submission of Required Documents:

The proponent must provide all necessary documents and details essential for the completion of the EIA/IEE report. This includes, but is not limited to, technical studies, environmental impact analyses, mitigation strategies, and any other information pertinent to assessing the project's environmental footprint.

3. Financial Responsibility for Fines and Penalties:

The proponent shall bear full responsibility for any fines or penalties levied by the EPA Punjab or the Environment Tribunal. This includes violations of environmental standards, non-compliance with regulatory requirements, or any other infractions identified during the review or implementation phases of the project.

4. Accuracy and Validity of Information:

The proponent is responsible for ensuring the correctness and validity of all information and documents provided to the consultant for onward submission to EPA Punjab. The consultant facilitating the process will not bear any responsibility for inaccuracies or omissions in the information supplied by the proponent. It is imperative that the proponent conducts thorough due diligence to guarantee that all submitted materials accurately reflect the project's potential environmental impacts and proposed mitigation measures.

These Terms of References are critical to ensuring that the process is conducted in a transparent, accurate, and regulatory-compliant manner. Adherence to these terms will facilitate a comprehensive environmental review of the project, enabling informed decision-making by the EPA Punjab and contributing to the sustainable development and environmental stewardship goals of the region.
